Letter from Prof Rolf Stahel

Dear Colleagues

It is my pleasure to present this ETOP slide set which has been designed to highlight and summarise key findings in thoracic cancers from the major congresses in 2023. This slide set specifically focuses on the **2023 ASCO® ANNUAL MEETING** and is available in 3 languages – English, Chinese and Japanese.

The area of clinical research in oncology is a challenging and continually changing environment. Within this environment we all value access to scientific data and research which helps to educate and inspire further advancements in our roles as scientists, clinicians and educators. I hope you find this review of the latest developments in thoracic cancers of benefit to you in your practice. If you would like to share your thoughts with us, we would welcome your comments. Please send any correspondence to etop@etop.eu-org.

I would like to thank our ETOP members Drs Enriqueta Felip and Solange Peters for their roles as Editors – for prioritising abstracts and reviewing slide content. The slide set you see before you would not be possible without their commitment and hard work.

Finally, we are also very grateful to Lilly Oncology for their financial, administrative and logistical support in the realisation of this complex yet rewarding activity.

A handwritten signature in black ink, appearing to read "Rolf Stahel".

Yours sincerely,

Rolf Stahel

President, ETOP Foundation Council

ETOP Medical Oncology Slide Deck Editors 2023

Focus: biomarkers (all stages)

Dr Enriqueta Felip

Oncology Department, Vall d'Hebron University Hospital, Barcelona, Spain

Focus: early and locally advanced NSCLC (stages I–III)

Dr Egbert Smit

Netherlands Cancer Institute, Antoni van Leeuwenhoek Hospital, Amsterdam, Netherlands

Focus: advanced NSCLC (not radically treatable stage III & stage IV)

Dr Solange Peters

Multidisciplinary Oncology Center, Lausanne Cancer Center, Lausanne, Switzerland

Focus: other malignancies, SCLC, mesothelioma, rare tumors

Dr Martin Reck

Department of Thoracic Oncology, Hospital Grosshansdorf, Grosshansdorf, Germany

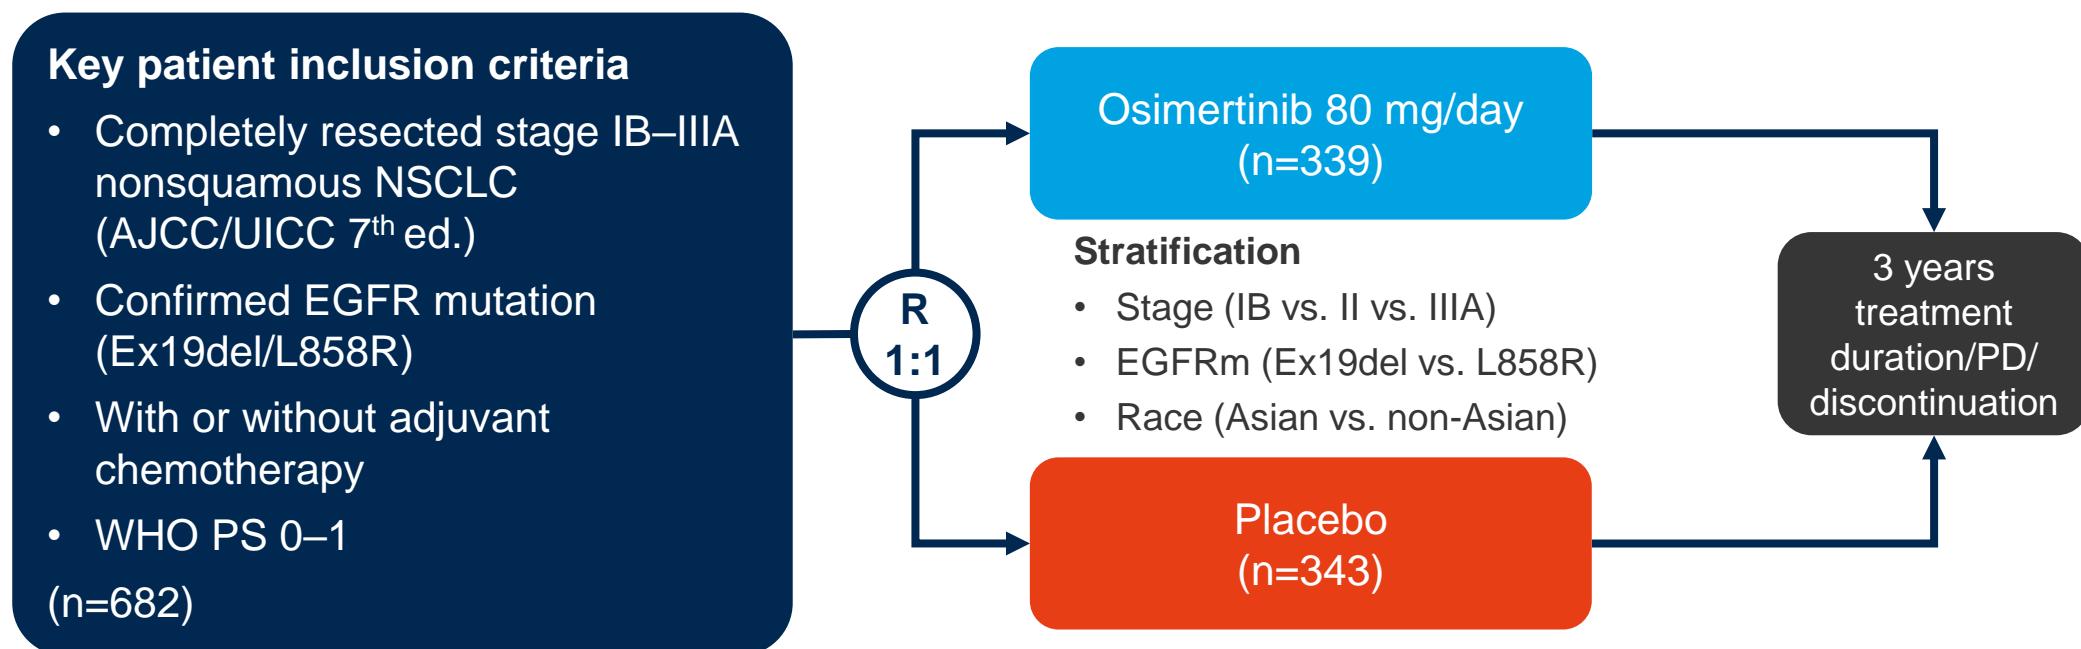

Contents

- Early stage and locally advanced NSCLC – Stages I, II and III
- Advanced NSCLC – Not radically treatable stage III and stage IV
 - Immunotherapy
 - Targeted therapies
 - ADCs and other therapies
- Other malignancies
 - SCLC, mesothelioma and thymic epithelial tumors

Early stage and locally advanced NSCLC – Stages I, II and III

LBA3: Overall survival analysis from the ADAURA trial of adjuvant osimertinib in patients with resected EGFR-mutated (EGFRm) stage IB–IIIA non-small cell lung cancer (NSCLC) – Herbst RS, et al

- Study objective
 - To evaluate the overall survival with adjuvant osimertinib in patients with resected EGFR-mutated NSCLC in the ADAURA study

Primary endpoint

- DFS (investigator assessed in stage II/IIIA)

Secondary endpoints

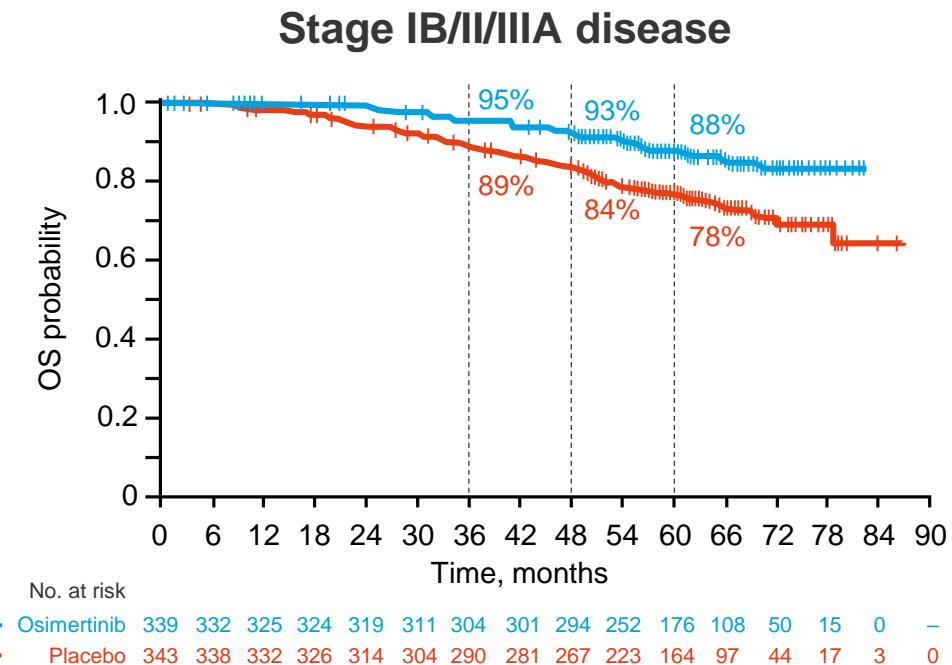

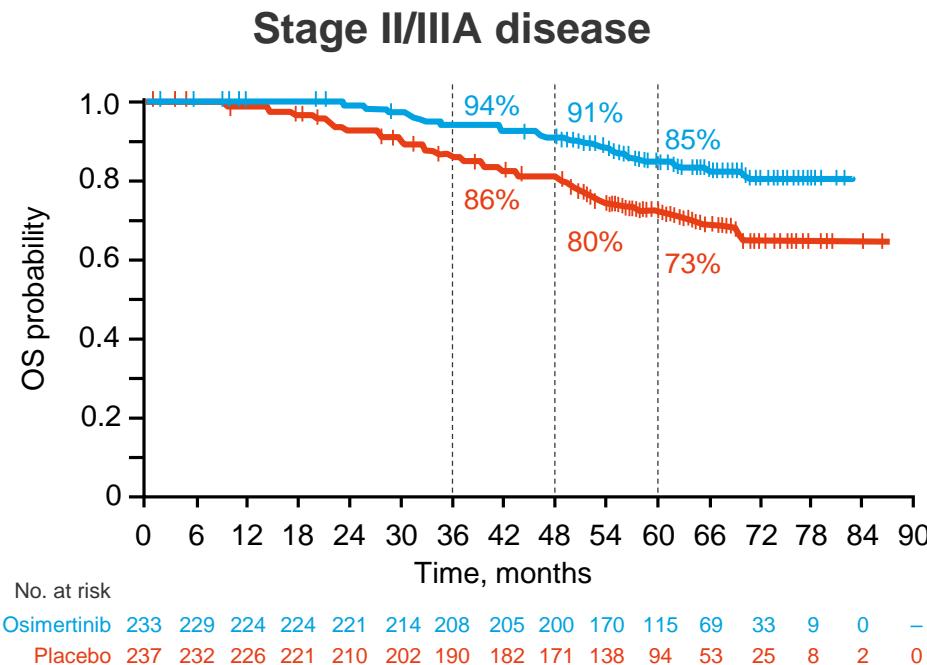

- DFS (overall population^a), OS, HRQoL, safety

^aStage IB, II and IIIA.

LBA3: Overall survival analysis from the ADAURA trial of adjuvant osimertinib in patients with resected EGFR-mutated (EGFRm) stage IB–IIIA non-small cell lung cancer (NSCLC) – Herbst RS, et al

- Key results

Overall survival

	Osimertinib (n=233)	Placebo (n=237)
Median follow-up, months	61.7	60.4
5-year OS rate, % (95%CI)	85 (79, 89)	73 (66, 78)
HR (95%CI); p-value	0.49 (0.33, 0.73); 0.0004	

	Osimertinib (n=339)	Placebo (n=343)
Median follow-up, months	61.5	61.5
5-year OS rate, % (95%CI)	88 (83, 91)	78 (73, 82)
HR (95%CI); p-value	0.49 (0.34, 0.70); <0.0001	

LBA3: Overall survival analysis from the ADAURA trial of adjuvant osimertinib in patients with resected EGFR-mutated (EGFRm) stage IB–IIIA non-small cell lung cancer (NSCLC) – Herbst RS, et al

- Key results (cont.)

OS across subgroups: patients with stage IB/II/IIIA disease

LBA3: Overall survival analysis from the ADAURA trial of adjuvant osimertinib in patients with resected EGFR-mutated (EGFRm) stage IB–IIIA non-small cell lung cancer (NSCLC) – Herbst RS, et al

- Key results (cont.)

AEs, n (%)	Osimertinib (n=337)	Placebo (n=343)
Any	330 (98)	309 (90)
Grade ≥3	79 (23)	48 (14)
Serious	68 (20)	47 (14)
Led to dose reduction	42 (12)	3 (1)
Led to dose interruption	91 (27)	43 (13)
Led to discontinuation	43 (13)	9 (3)
Led to death	1 (>1)	2 (1)

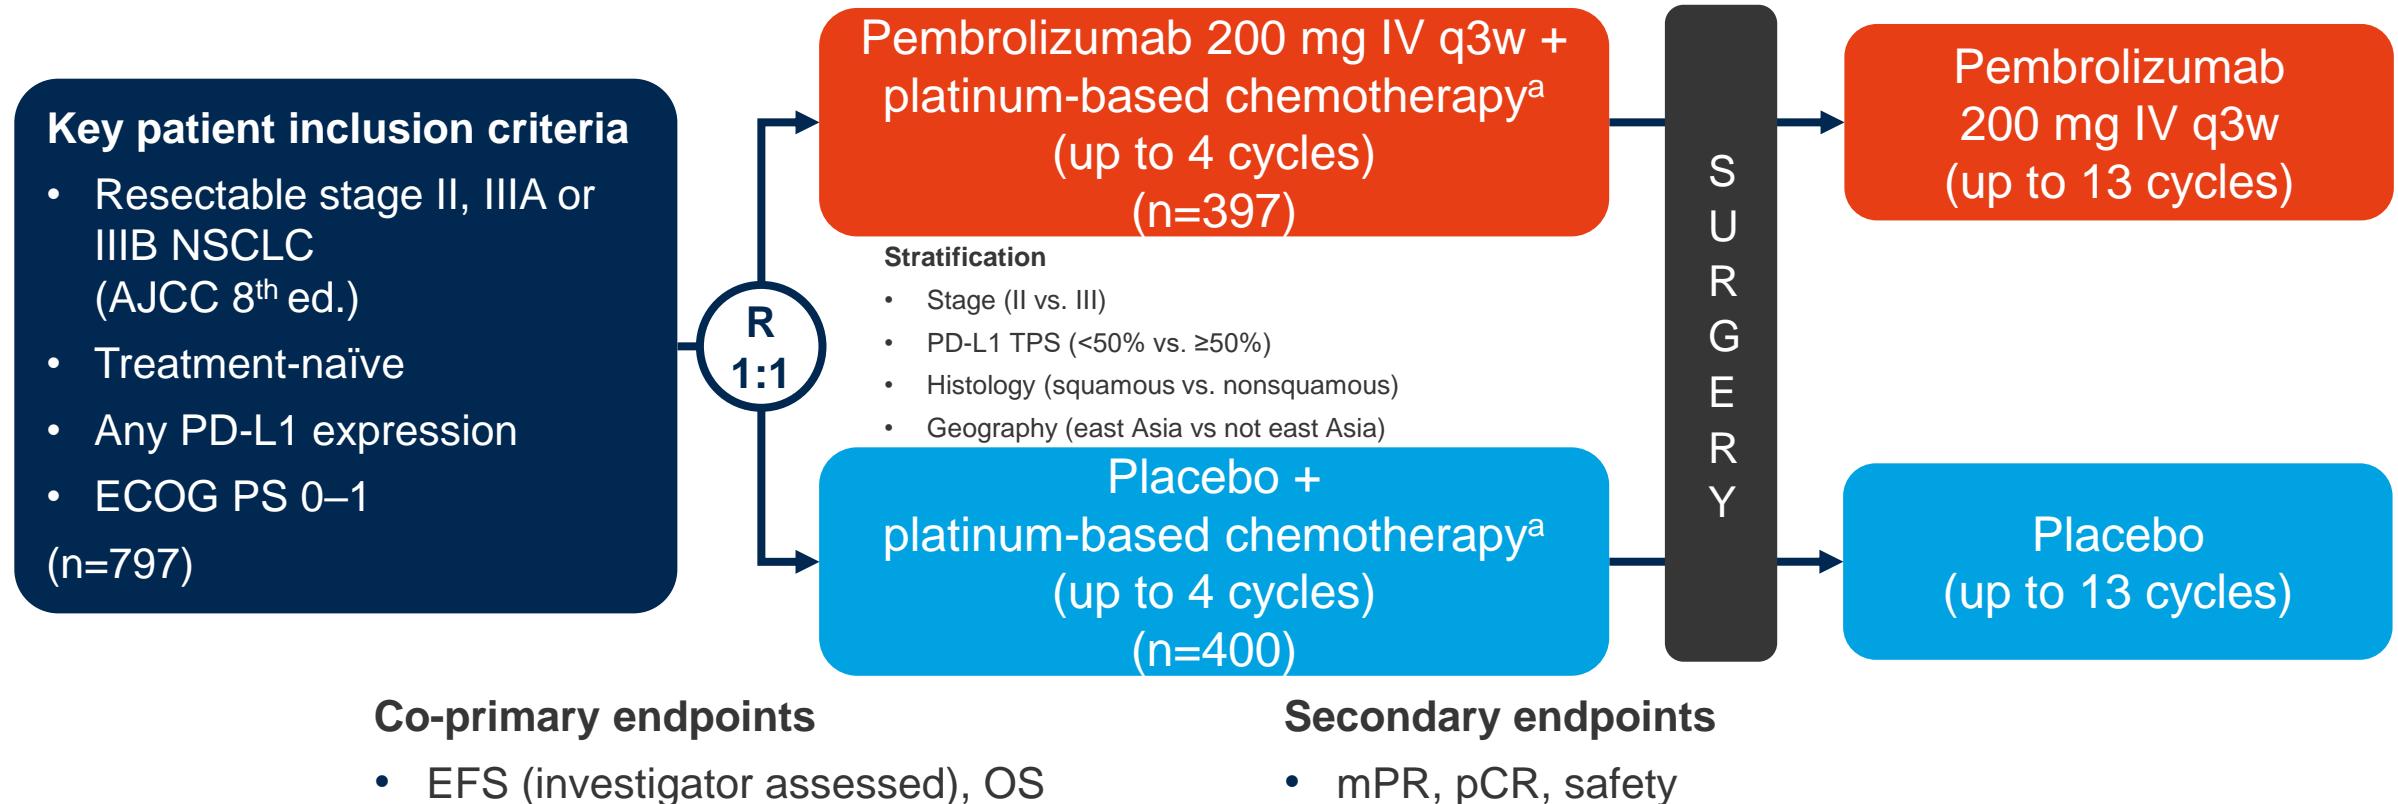

TRAEs, n (%)	Osimertinib (n=337)	Placebo (n=343)
Any	308 (91)	199 (58)
Grade ≥3	36 (11)	7 (2)
Serious	10 (3)	2 (1)
Led to death	0	0

- Conclusions

- In patients with resected EGFR-mutated NSCLC, adjuvant osimertinib showed significant OS benefit compared with placebo with no new safety signals observed

LBA100: KEYNOTE-671: Randomized, double-blind, phase 3 study of pembrolizumab or placebo plus platinum-based chemotherapy followed by resection and pembrolizumab or placebo for early stage NSCLC – Wakelee HA, et al

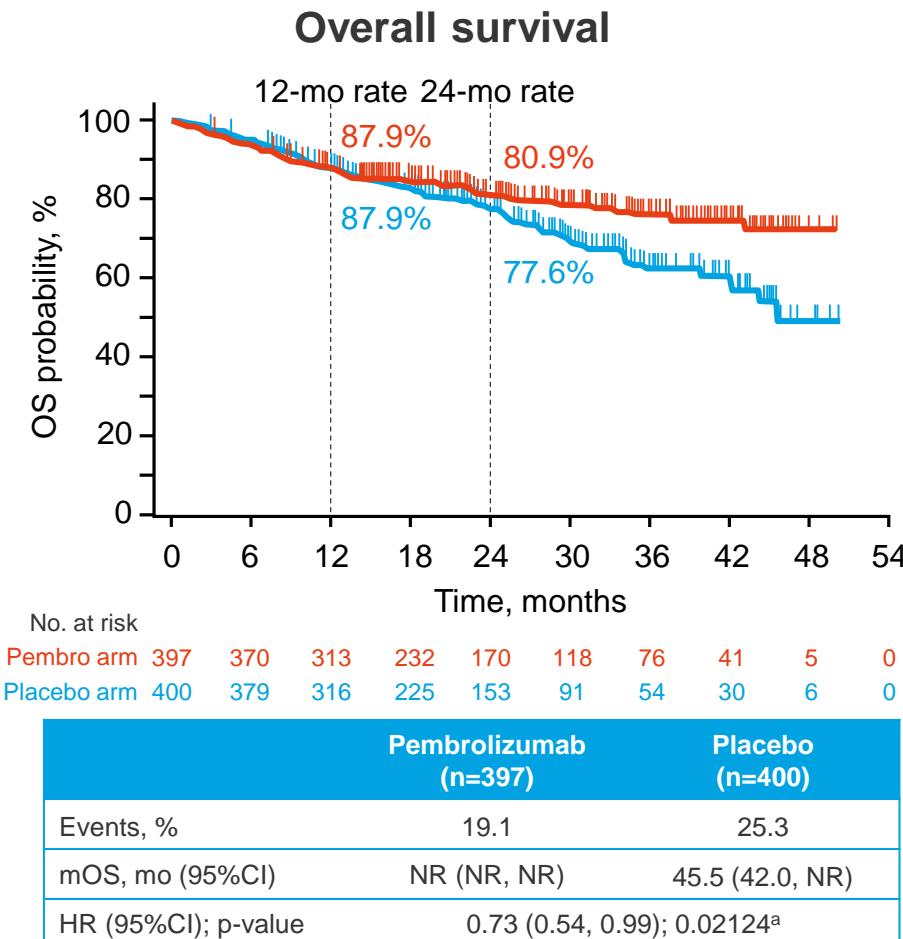

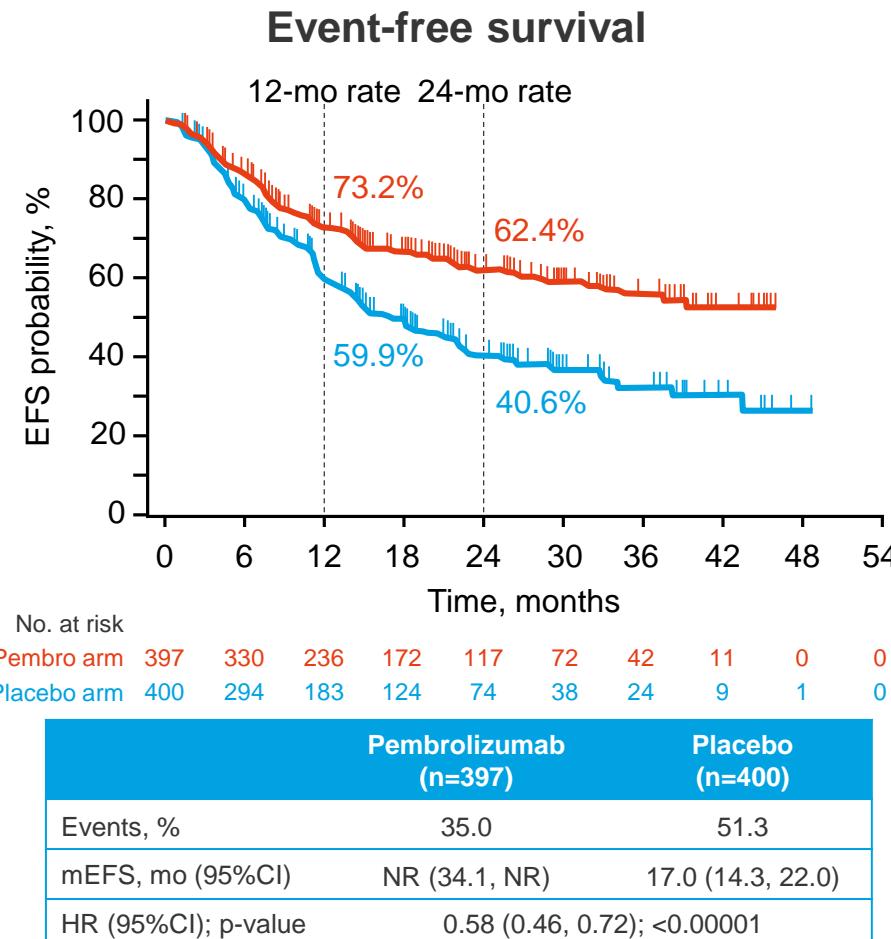

- Study objective
 - To evaluate the efficacy and safety of pembrolizumab + platinum-based chemotherapy prior to surgery followed by pembrolizumab in patients with early stage NSCLC in the KEYNOTE-671 study

^a*Cisplatin* 75 mg/m² q3w + gemcitabine 1000 mg/m² IV D1, 8 q3w for squamous and *cisplatin* 75 mg/m² q3w + pemetrexed 500 mg/m² IV q3w for nonsquamous.

LBA100: KEYNOTE-671: Randomized, double-blind, phase 3 study of pembrolizumab or placebo plus platinum-based chemotherapy followed by resection and pembrolizumab or placebo for early stage NSCLC – Wakelee HA, et al

- Key results

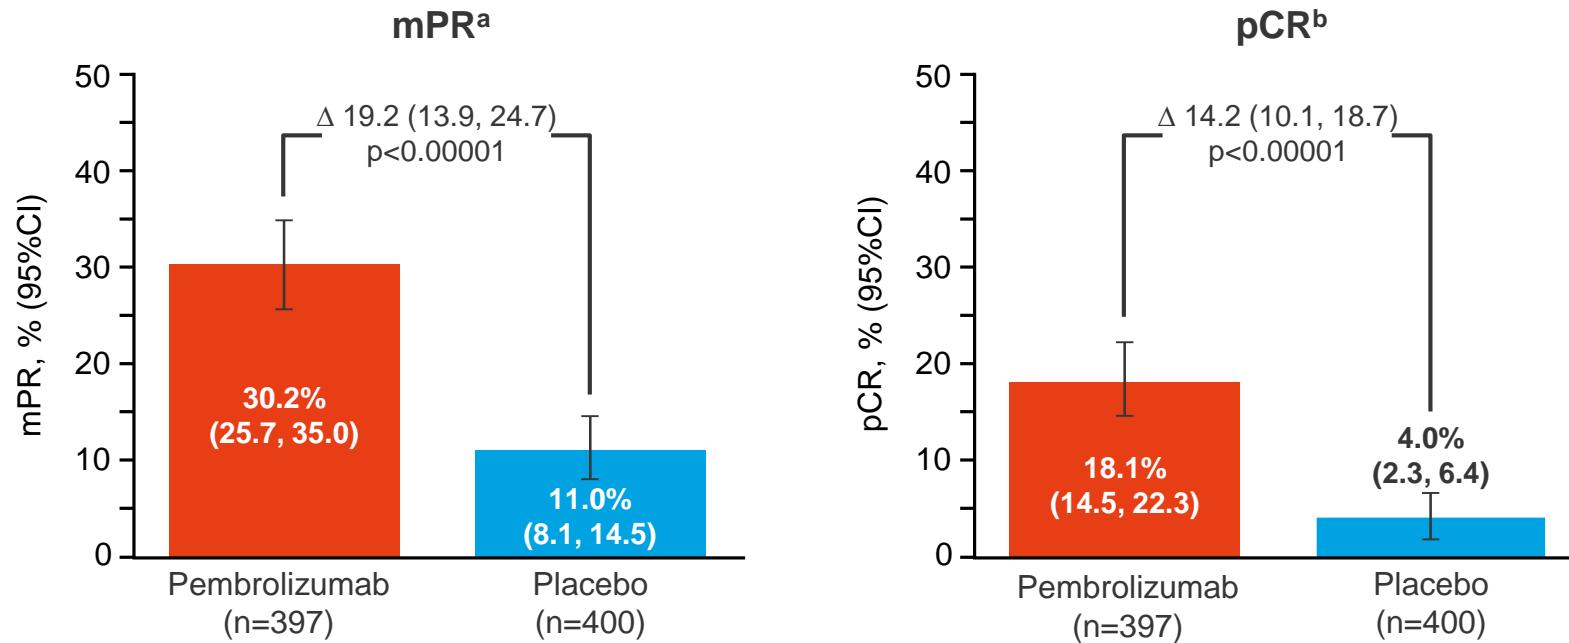

Median follow-up: 25.2 mo (7.5–50.6)

^aSignificant boundary was not met at IA1. OS will continue to be tested according to the analysis plan. Data cut-off date (IA1): July 29, 2022.

LBA100: KEYNOTE-671: Randomized, double-blind, phase 3 study of pembrolizumab or placebo plus platinum-based chemotherapy followed by resection and pembrolizumab or placebo for early stage NSCLC – Wakelee HA, et al

- Key results (cont.)

Pathological response Assessed per blinded, independent pathological review

^aDefined as ≤10% viable tumor cells in resected primary tumor and lymph nodes;

^bdefined as absence of residual invasive cancer in resected primary tumor and lymph nodes.

LBA100: KEYNOTE-671: Randomized, double-blind, phase 3 study of pembrolizumab or placebo plus platinum-based chemotherapy followed by resection and pembrolizumab or placebo for early stage NSCLC – Wakelee HA, et al

- Key results (cont.)

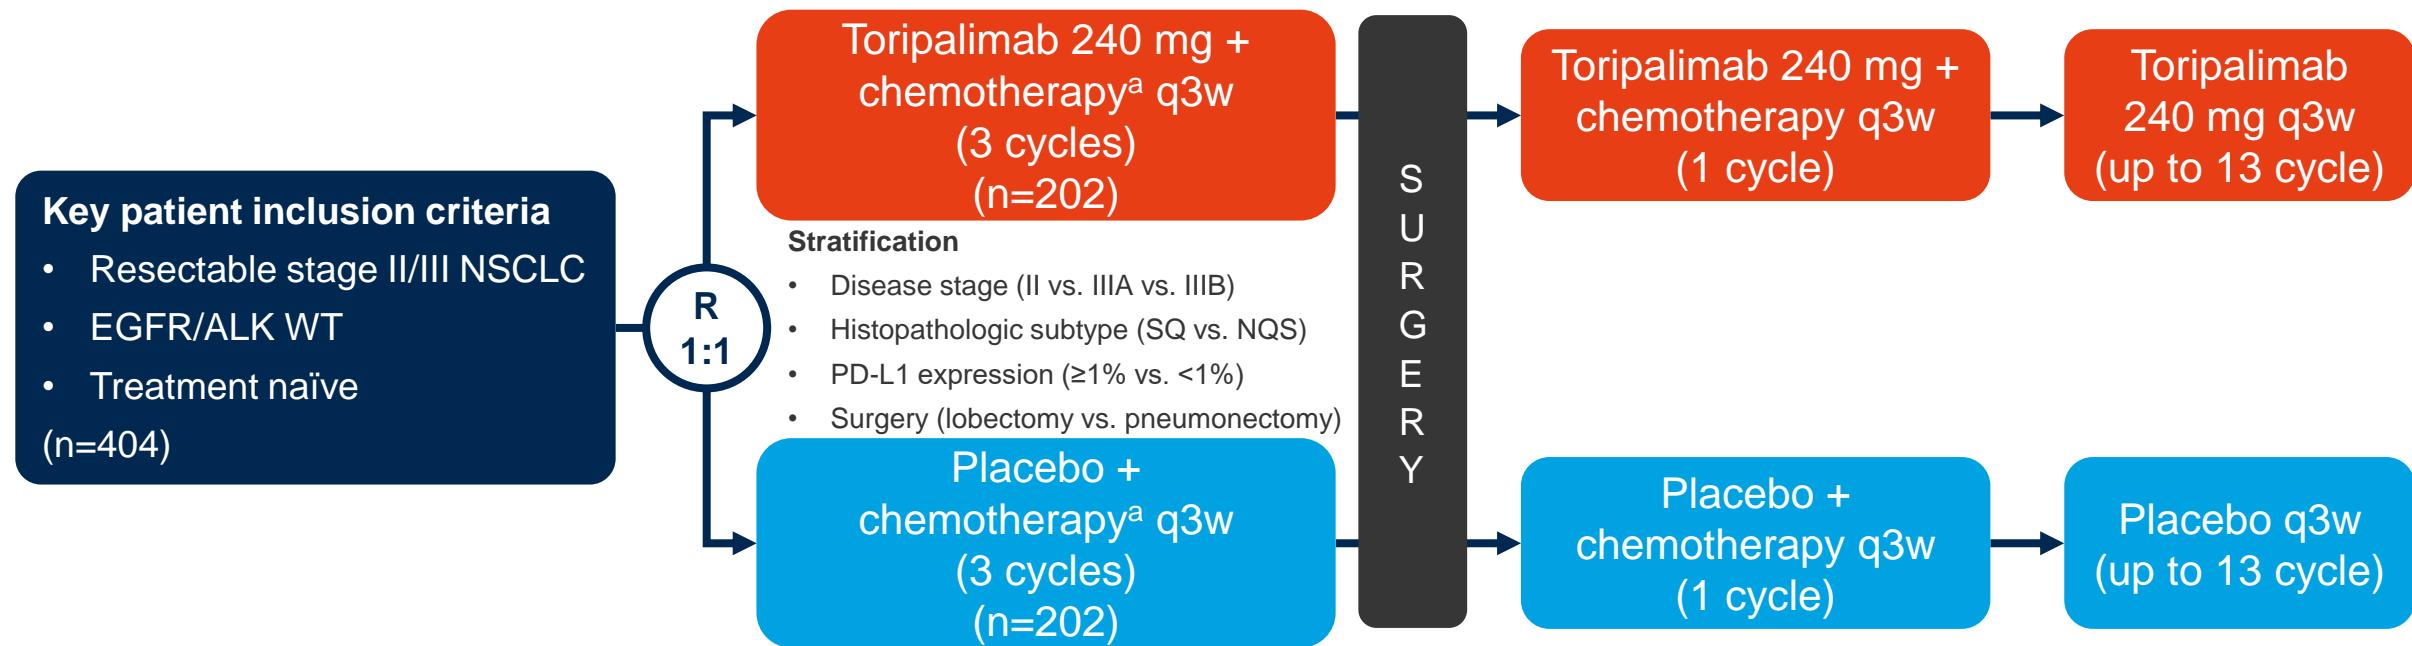

AEs, n (%)	Pembrolizumab (n=396)	Placebo (n=399)
TRAEs	383 (96.7)	379 (95.0)
Grade 3–5	178 (44.9)	149 (37.3)
Serious	70 (17.7)	57 (14.3)
Led to death	4 (1.0)	3 (0.8)
Led to treatment discontinuation	50 (12.6)	21 (5.3)
irAEs and infusion reactions	100 (25.3)	42 (10.5)
Grade 3–5	23 (5.8)	6 (1.5)
Serious	21 (5.3)	6 (1.5)
Led to death	1 (0.3)	0
Led to treatment discontinuation	20 (5.1)	3 (0.8)

- Conclusions

- In patients with early stage NSCLC, pembrolizumab + cisplatin-based chemotherapy prior to surgery followed by adjuvant pembrolizumab demonstrated improvement in EFS and higher pathological response than neoadjuvant chemotherapy and surgery alone with a safety profile consistent with previously reported data

8501: Perioperative toripalimab + platinum-doublet chemotherapy vs chemotherapy in resectable stage II/III non-small cell lung cancer (NSCLC): Interim event-free survival (EFS) analysis of the phase III NEOTORCH study – Lu S, et al

- Study objective
 - To evaluate the efficacy and safety of perioperative toripalimab + platinum-based chemotherapy in patients with resectable stage II/III NSCLC at an interim analysis of the NEOTORCH study

Primary endpoints

- EFS (investigator assessed), MPR (BICR) in stage II and II/III populations^b

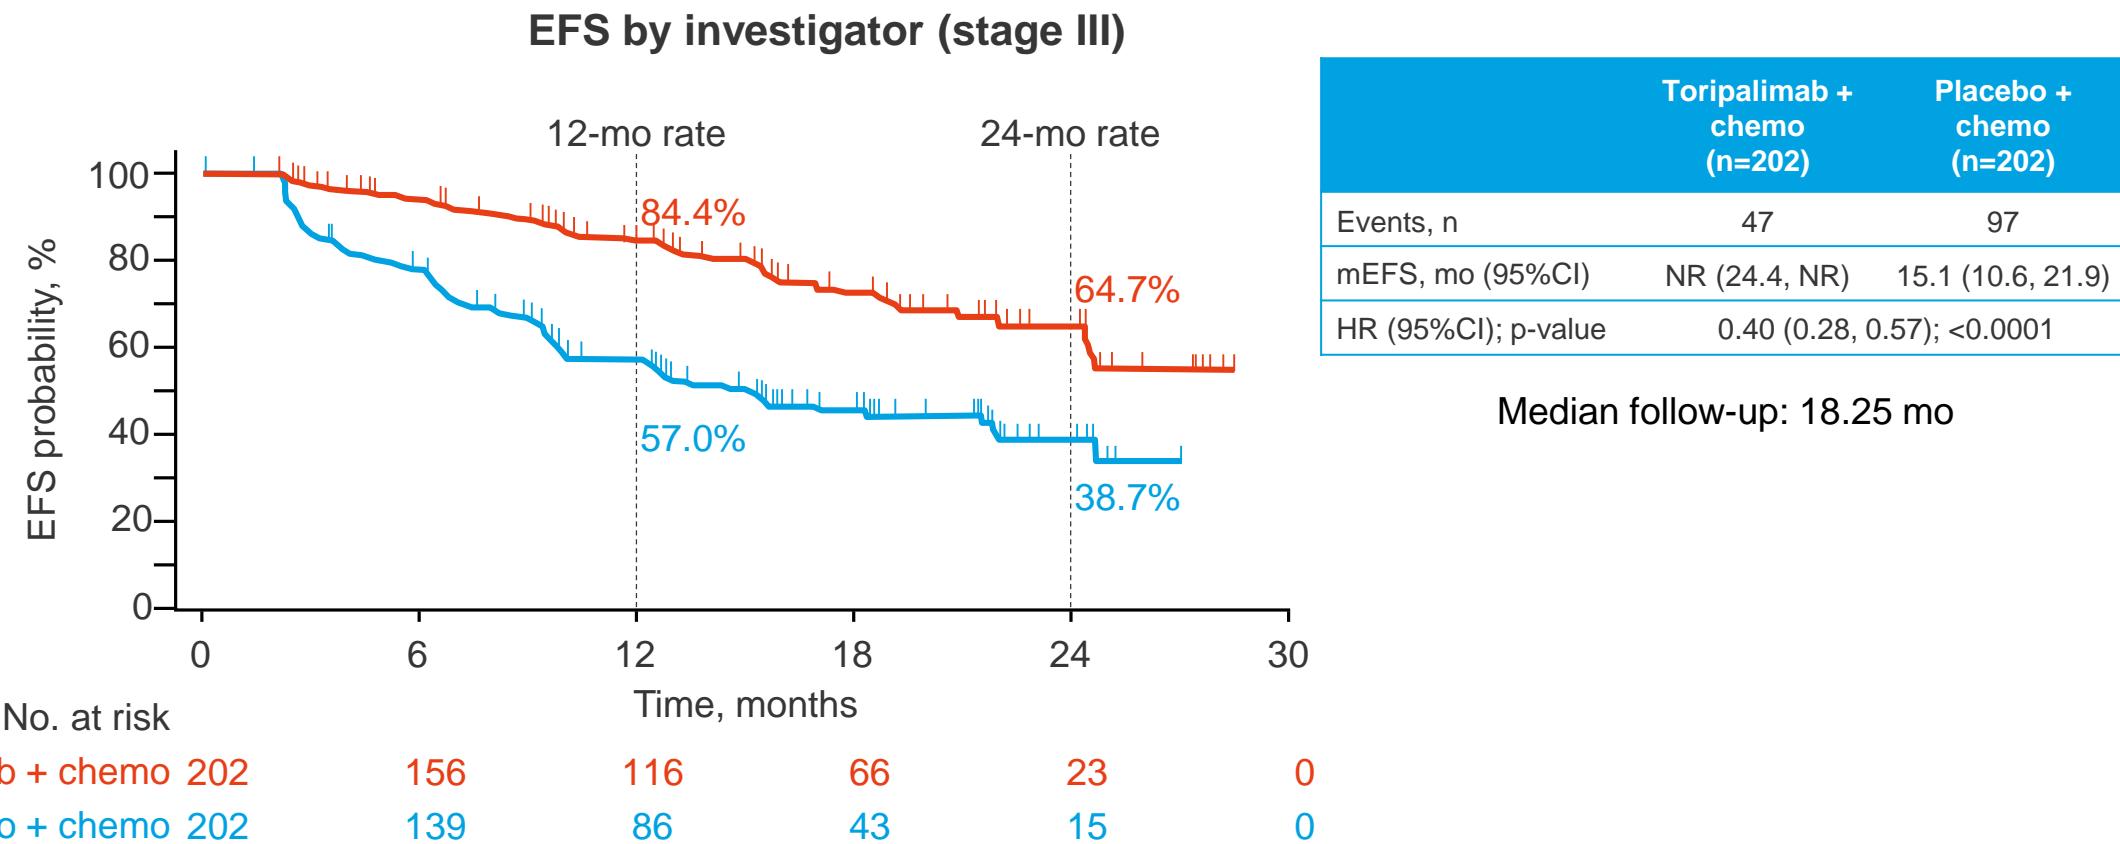

Secondary endpoints

- OS, pCR, safety

^aCisplatin 75 mg/m² IV q3w D1 or carboplatin AUC5 IV q3w D1 + pemetrexed 500 mg/m² IV q3w D1 (for nonsquamous only) or paclitaxel 175 mg/m² q3w or docetaxel 60–75 mg/m² q3w; ^bonly stage III results were reported.

8501: Perioperative toripalimab + platinum-doublet chemotherapy vs chemotherapy in resectable stage II/III non-small cell lung cancer (NSCLC): Interim event-free survival (EFS) analysis of the phase III NEOTORCH study – Lu S, et al

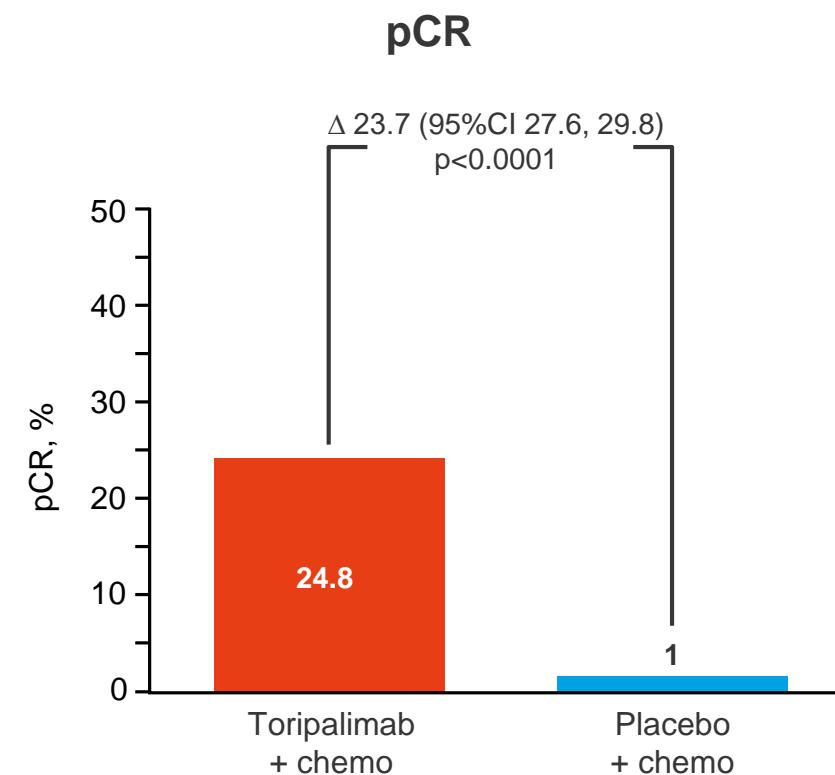

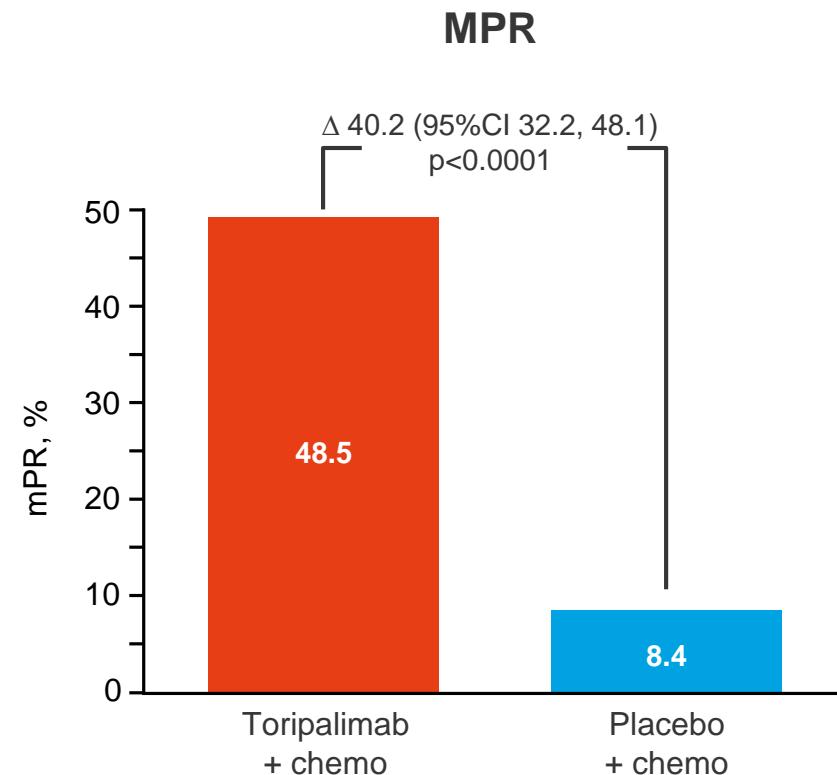

- Key results

8501: Perioperative toripalimab + platinum-doublet chemotherapy vs chemotherapy in resectable stage II/III non-small cell lung cancer (NSCLC): Interim event-free survival (EFS) analysis of the phase III NEOTORCH study – Lu S, et al

- Key results (cont.)

Response by BIPR (stage III)

8501: Perioperative toripalimab + platinum-doublet chemotherapy vs chemotherapy in resectable stage II/III non-small cell lung cancer (NSCLC): Interim event-free survival (EFS) analysis of the phase III NEOTORCH study – Lu S, et al

- Key results (cont.)

	Toripalimab + chemo	Placebo + chemo
PD-L1 <1% or NE, n	69	70
mEFS, mo	NE	15.3
HR (95%CI)	0.59 (0.327, 1.034)

HR (95%CI)	0.31 (0.176, 0.554)	
PD-L1 ≥50%, n	64	64
mEFS, mo	NE	15.5
HR (95%CI)	0.31 (0.152, 0.618)	
Nonsquamous (n=45) events, n	12	21
mEFS, mo (95%CI)	NE (17.5, NE)	21.9 (9.7, NE)
HR (95%CI); p-value	0.54 (0.265, 1.096); 0.0827	
Squamous (n=157) events, n	35	75
mEFS, mo (95%CI)	NE (24.4, NE)	12.9 (9.9, 21.6)
HR (95%CI); p-value	0.35 (0.236, 0.528); <0.0001	

	Toripalimab + chemo (n=202)	Placebo + chemo (n=202)
AEs, n (%)		
Any	201 (99.5)	199 (98.5)
Grade ≥3	128 (63.4)	109 (54.0)
Serious	82 (40.6)	57 (28.2)
Led to death	6 (3.0)	4 (2.0)
Treatment related	1 (0.5)	0
Led to interruption	57 (28.2)	29 (14.4)
Led to discontinuation	19 (9.4)	15 (7.4)
Any investigator-determined irAEs	85 (42.1)	46 (22.8)
Grade ≥3	24 (11.9)	6 (3.0)
Any infusion-related reactions	7 (3.5)	13 (6.4)

- Conclusions

- In patients with resectable stage III NSCLC, perioperative toripalimab + chemotherapy provided longer EFS and higher pathological response rates compared with chemotherapy alone and was generally well-tolerated

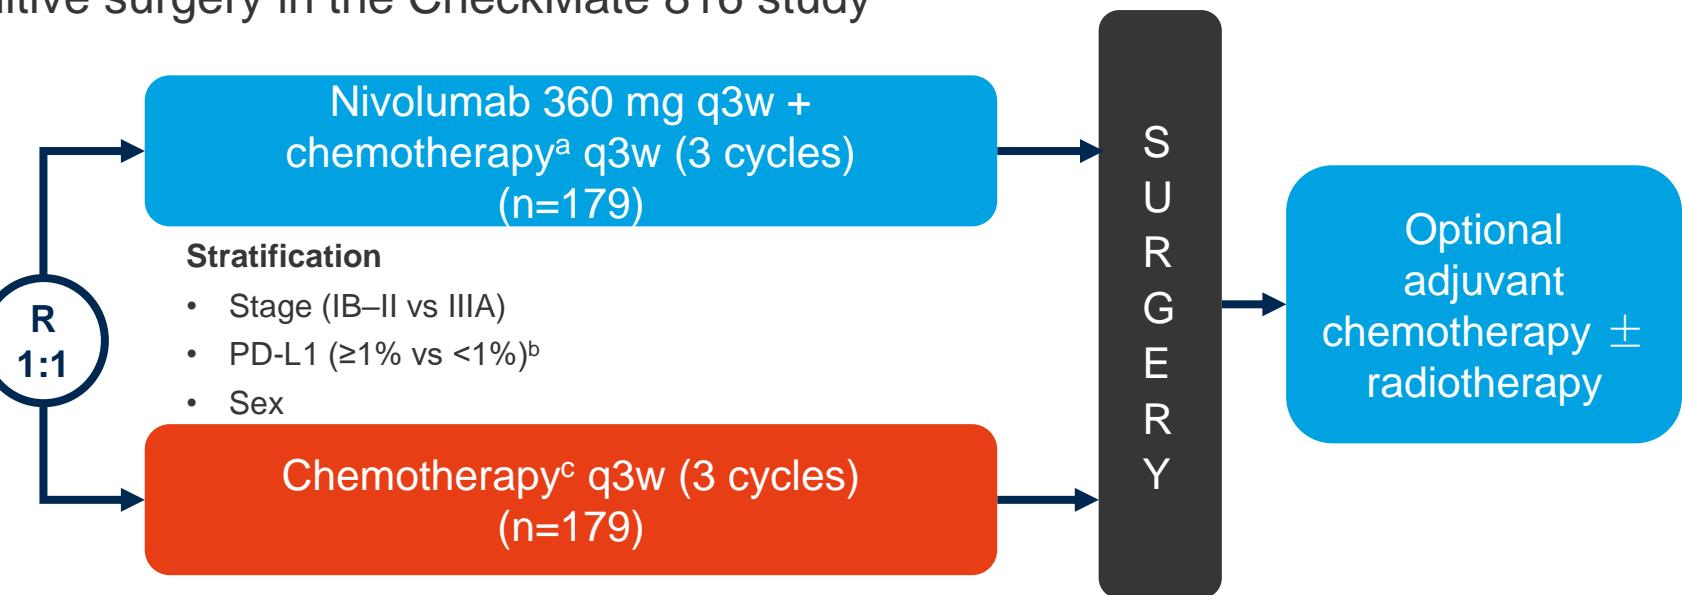

8521: Clinical outcomes with neoadjuvant nivolumab (N) + chemotherapy (C) vs C by definitive surgery in patients (pts) with resectable NSCLC: 3-y results from the phase 3 CheckMate 816 trial – Spicer J, et al

- Study objective
 - To evaluate the efficacy and safety of neoadjuvant nivolumab + chemotherapy in patients with resectable NSCLC with and without definitive surgery in the CheckMate 816 study

Key patient inclusion criteria

- Stage IB (≥ 4 cm)–IIIA NSCLC (per AJCC 7th edition)
- No known sensitizing EGFR or ALK alterations
- Treatment naïve
- ECOG PS 0–1

(n=358)

Primary endpoints

- pCR (0% viable tumor cells in lung and lymph nodes), EFS (BICR)

Secondary endpoints

- MPR, OS, time to death or distant metastases, safety

^aGemcitabine + cisplatin or paclitaxel + carboplatin for squamous and pemetrexed + cisplatin or paclitaxel + carboplatin for nonsquamous; ^bdetermined by the PD-L1 28-8 pharmDx assay;

^cpaclitaxel + carboplatin; or cisplatin + vinorelbine or docetaxel or gemcitabine for squamous and cisplatin + pemetrexed for nonsquamous.

8521: Clinical outcomes with neoadjuvant nivolumab (N) + chemotherapy (C) vs C by definitive surgery in patients (pts) with resectable NSCLC: 3-y results from the phase 3 CheckMate 816 trial – Spicer J, et al

- Key results

With definitive surgery	Nivolumab + chemo (n=149)	Chemo (n=135)
mEFS, mo (95%CI)	NR (44.4, NR)	31.8 (18.0, NR)
HR (95%CI)	0.67 (0.47, 0.95)	
mTTDM, mo (95%CI)	NR (NR, NR)	46.8 (34.3, NR)
HR (95%CI)	0.55 (0.36, 0.84)	
mEFS2, mo (95%CI)	NR (NR, NR)	NR (NR, NR)
HR (95%CI)	0.60 (0.39, 0.95)	

Without definitive surgery	Nivolumab + chemo (n=30)	Chemo (n=44)
mEFS, mo (95%CI)	6.7 (2.7, 24.8)	4.1 (2.5, 11.2)
HR (95%CI)	0.75 (0.44, 1.28)	
mTTDM, mo (95%CI)	21.8 (6.7, 37.8)	15.6 (11.2, 18.6)
HR (95%CI)	0.63 (0.34, 1.16)	
mEFS2, mo (95%CI)	12.3 (8.4, 37.8)	15.5 (10.2, 18.6)
HR (95%CI)	0.94 (0.53, 1.66)	

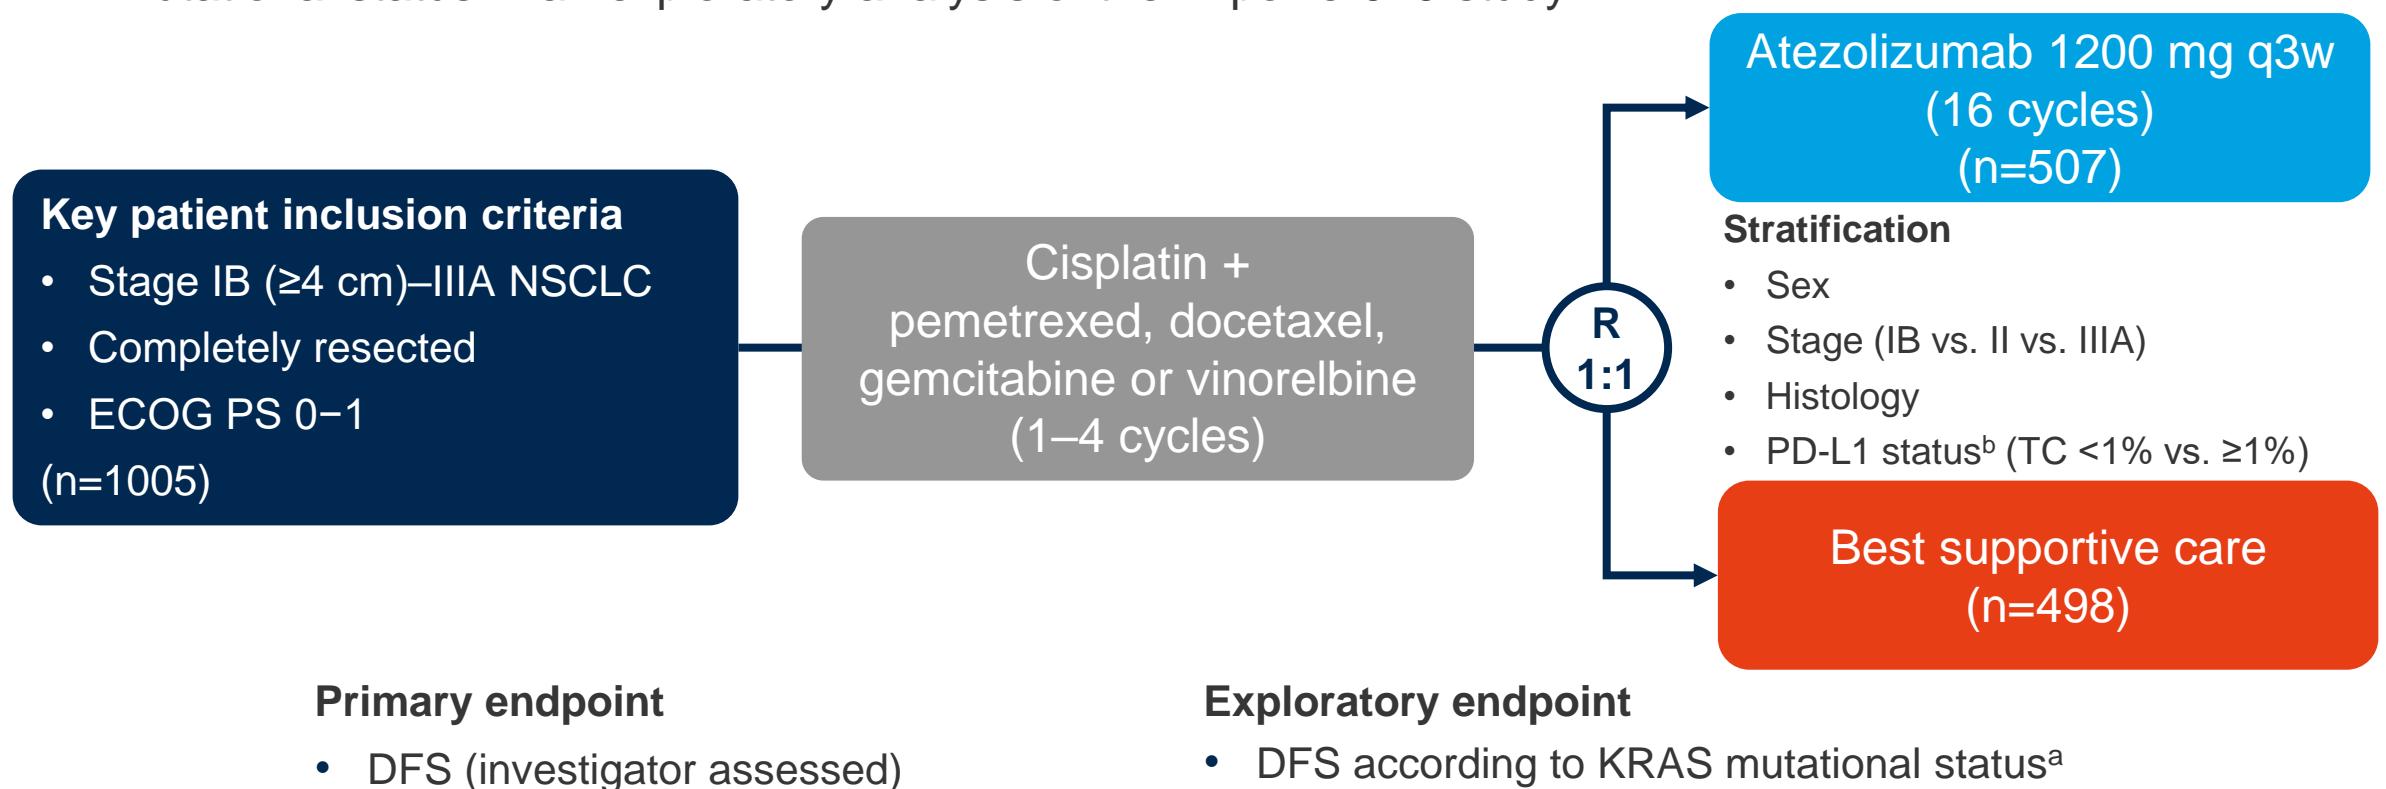

Grade 3–4 TRAEs, n (%)	With definitive surgery		Without definitive surgery	
	Nivolumab + chemo (n=149)	Chemo (n=135)	Nivolumab + chemo (n=27)	Chemo (n=41)
Any	56 (38)	48 (36)	7 (26)	19 (46)
Serious	13 (9)	9 (7)	2 (7)	5 (12)
Led to discontinuation	8 (5)	5 (4)	2 (7)	1 (2)
Led to death	0	1 (1)	0	2 (5)
Related to surgery	17 (11)	20 (15)	-	-

- Conclusions

- In patients with resectable NSCLC, neoadjuvant nivolumab + chemotherapy continued to provide long-term EFS in patients with resection with no additional safety findings and there was a trend towards improved outcomes in patients without definitive surgery

8522: IMpower010: Exploratory analysis of disease-free survival by KRAS status in patients with stage II-IIIA NSCLC treated with adjuvant atezolizumab vs best supportive care – Reck M, et al

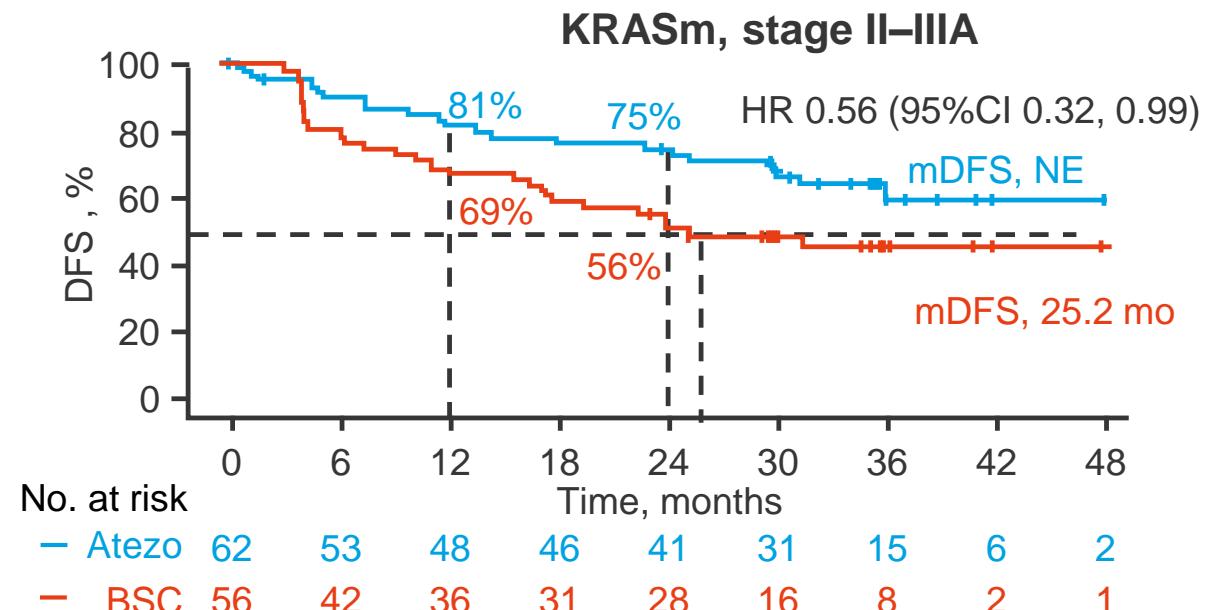

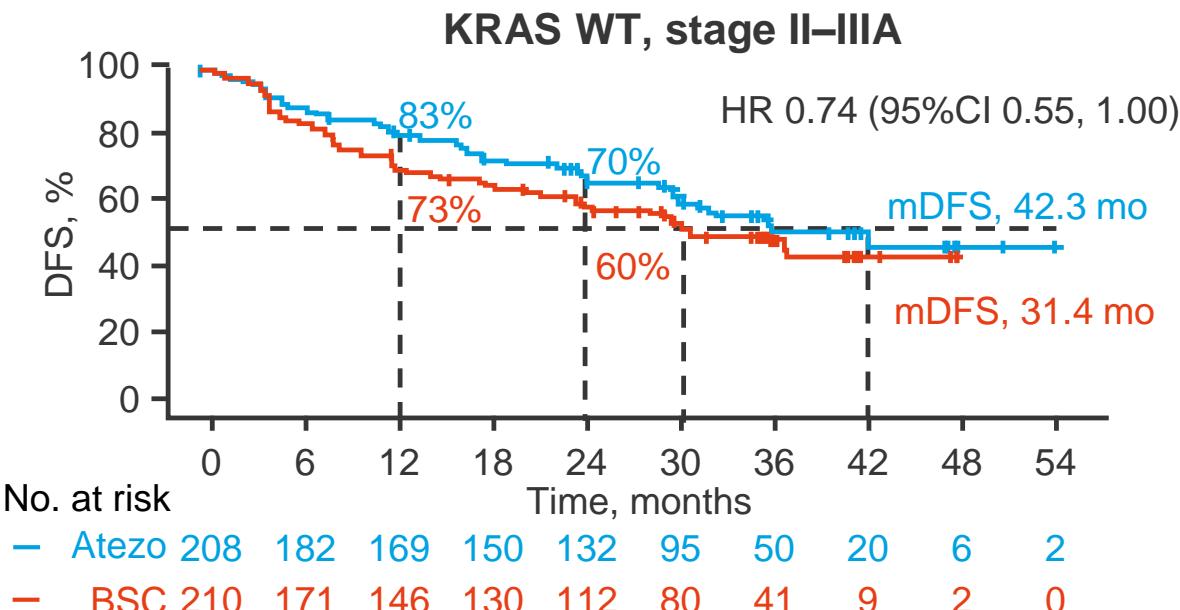

- Study objective
 - To evaluate the efficacy of adjuvant atezolizumab in patients with stage II–IIIA NSCLC according to KRAS mutational status in an exploratory analysis of the IMpower010 study

^aKRAS mutational status was assessed retrospectively in the whole-exome sequencing biomarker-evaluable population (WES-BEP); ^bby SP142.

8522: IMpower010: Exploratory analysis of disease-free survival by KRAS status in patients with stage II-IIIA NSCLC treated with adjuvant atezolizumab vs best supportive care – Reck M, et al

- Key results

- Atezolizumab provided DFS benefit in KRASm patients regardless of PD-L1 status (PD-L1 TC <1%, HR 0.67 [95%CI 0.26, 1.73]; PD-L1 TC ≥1%, HR 0.52 [95%CI 0.25, 1.08])

- Conclusions

- In patients with stage II–IIIA NSCLC, atezolizumab showed improvement in DFS regardless of KRAS mutation status and PD-L1 expression compared with BSC in this exploratory analysis

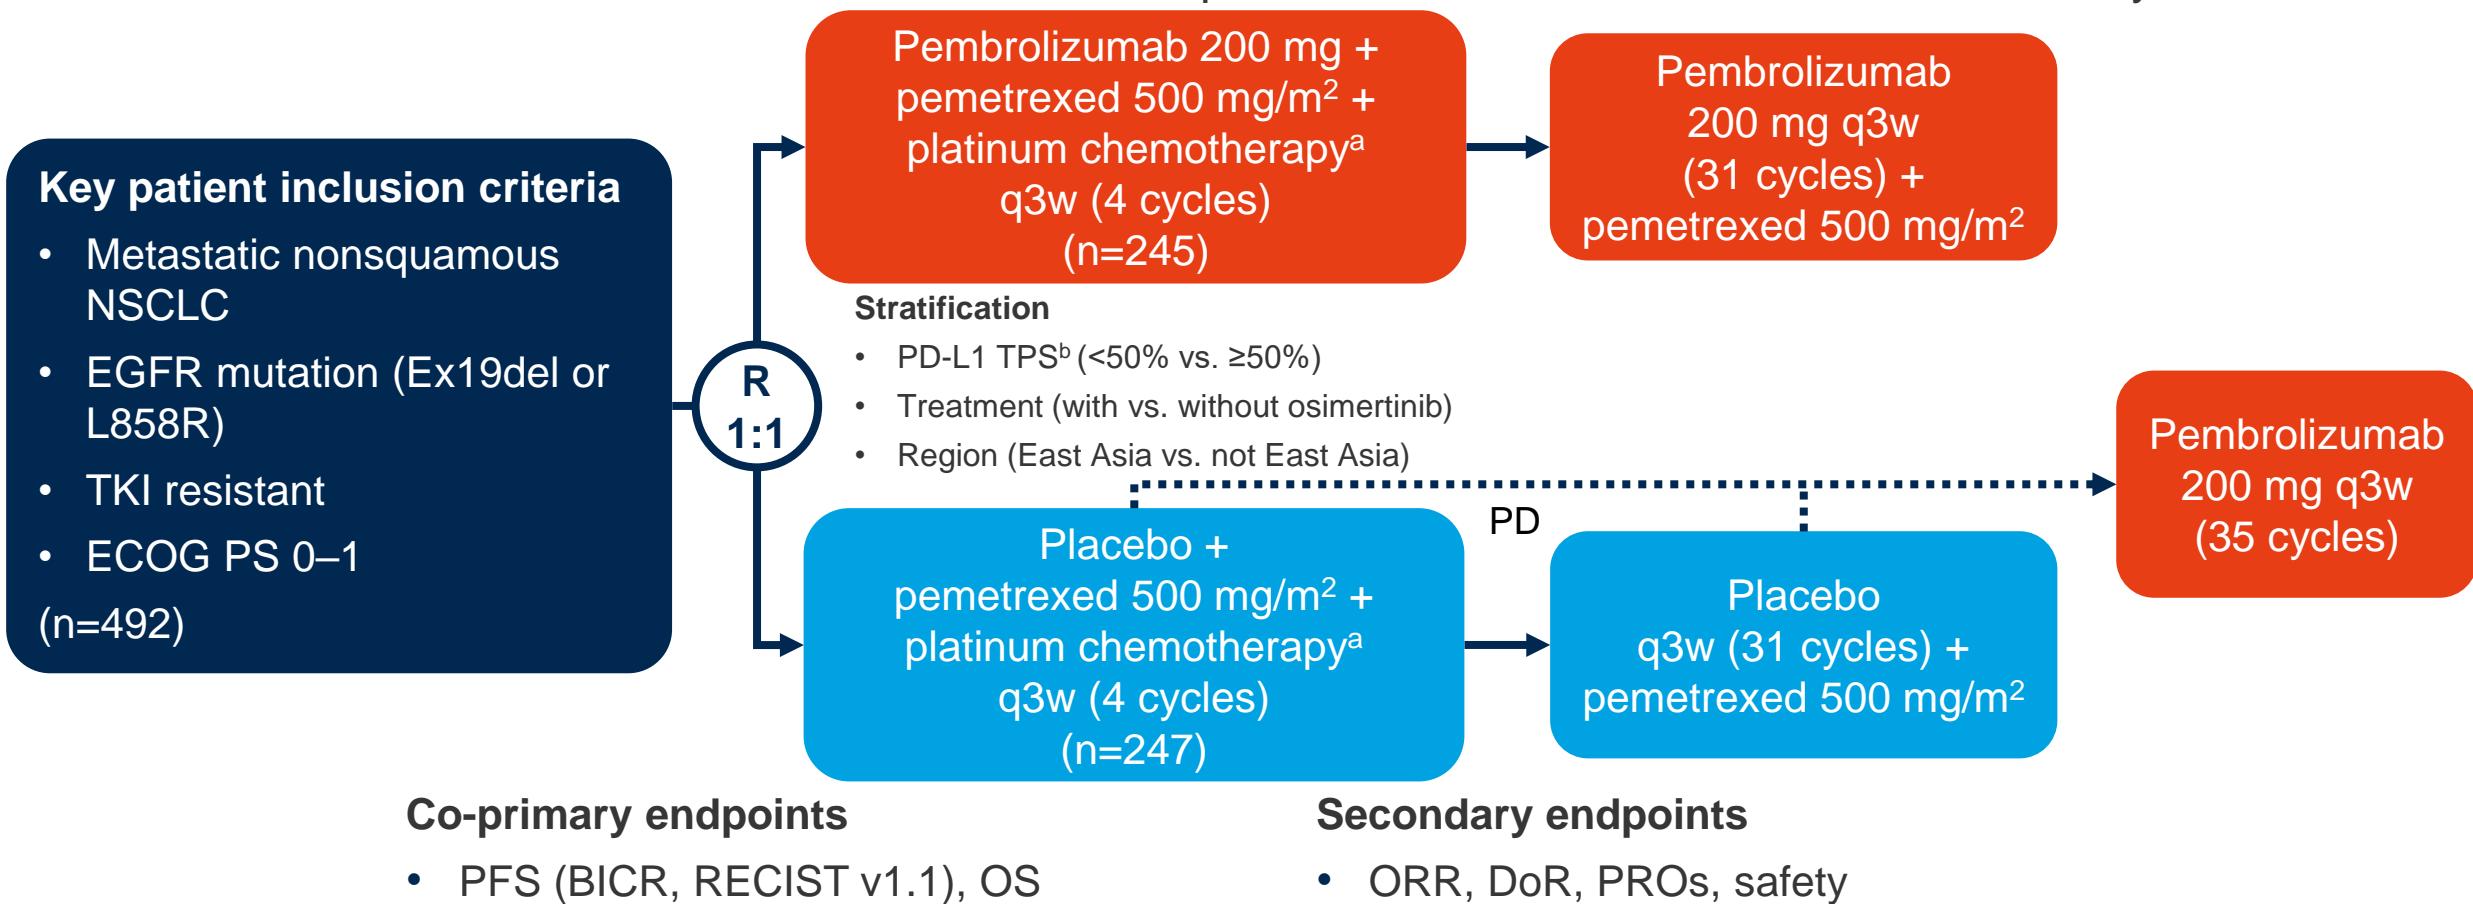

Advanced NSCLC

Not radically treatable stage III and stage IV

Immunotherapy

LBA9000: Pemetrexed and platinum with or without pembrolizumab for tyrosine kinase inhibitor (TKI)-resistant, EGFR-mutant, metastatic nonsquamous NSCLC: Phase 3 KEYNOTE-789 study – Yang JC, et al

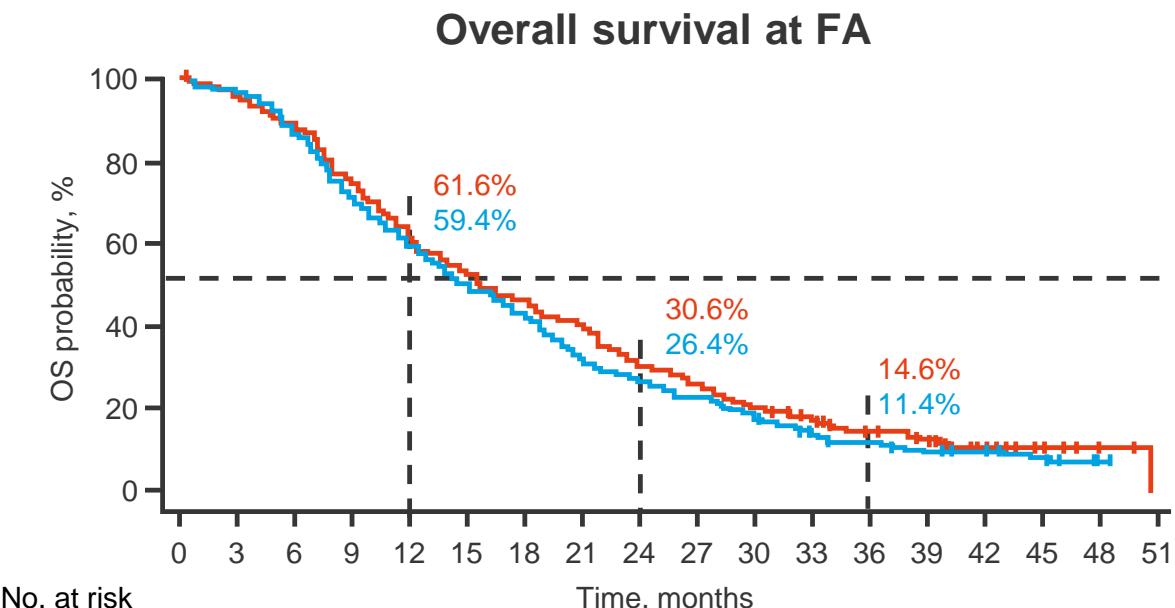

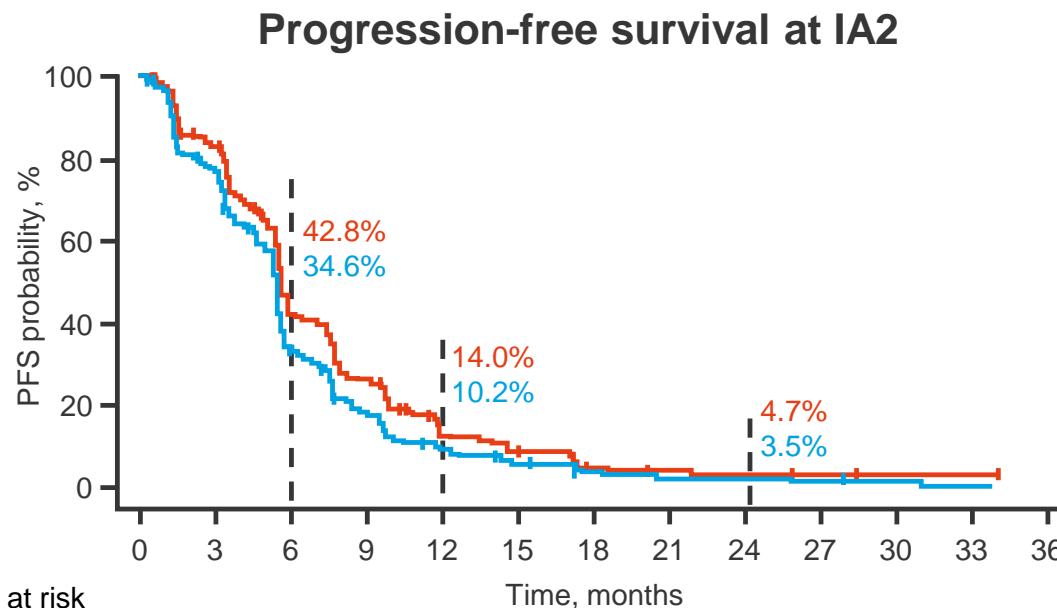

- Study objective
 - To evaluate the efficacy and safety of pembrolizumab + pemetrexed + platinum chemotherapy in patients with TKI-resistant, EGFR mutant metastatic nonsquamous NSCLC in the KEYNOTE-789 study

^aCarboplatin AUC5 or cisplatin 75 mg/m²; ^bassessed using PD-L1 IHC 22C3 pharmDx.

- Conclusions

- In patients with advanced NSCLC without EGFR/ALK mutations, 1L toripalimab + chemotherapy significantly improved OS compared with chemotherapy alone and had a safety profile consistent with previous findings

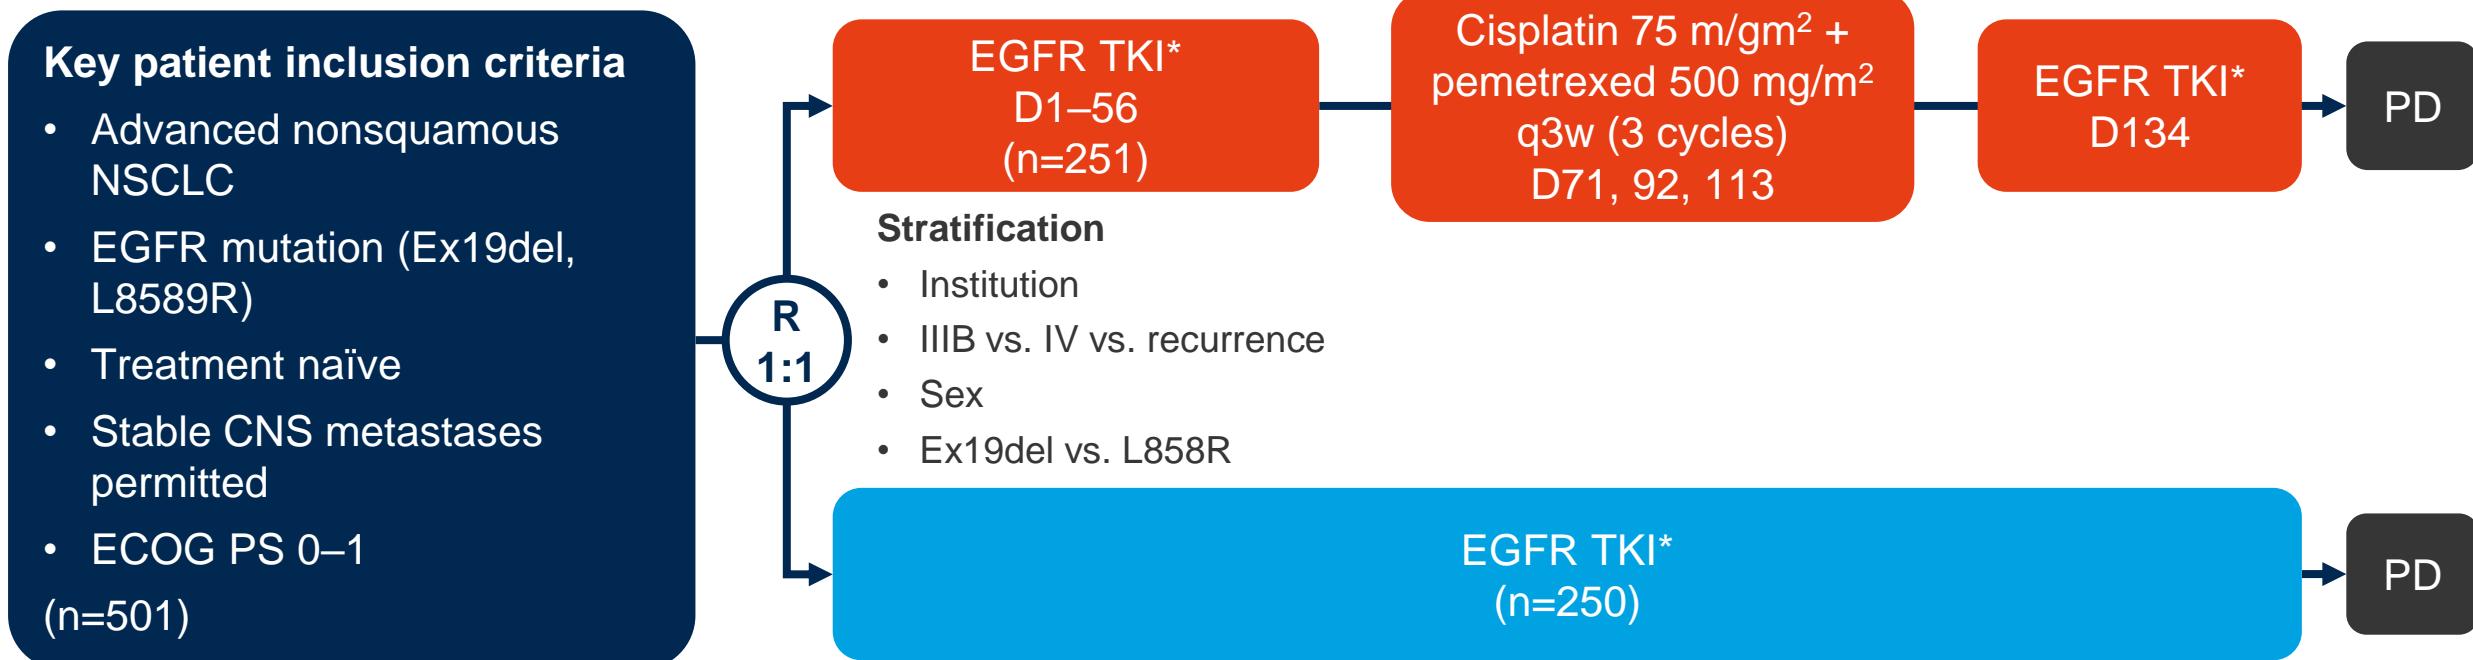

Advanced NSCLC

Not radically treatable stage III and stage IV

Targeted therapies

LBA9009: A phase III study comparing EGFR tyrosine kinase inhibitor (EGFR-TKI) monotherapy and EGFR-TKI with inserted cisplatin (CDDP) plus pemetrexed (PEM) as a first-line treatment in patients (pts) with advanced non-squamous non–small-cell lung cancer (NSqNSCLC) harboring EGFR activating mutation (EGFR-NSqNSCLC): JCOG1404/WJOG8214L, AGAIN study – Kanda S, et al

- **Study objective**
 - To evaluate the efficacy and safety of 1L EGFR TKI alone or combined with cisplatin + pemetrexed in patients with EGFR-mutant advanced nonsquamous NSCLC in the AGAIN study

Primary endpoint

- OS

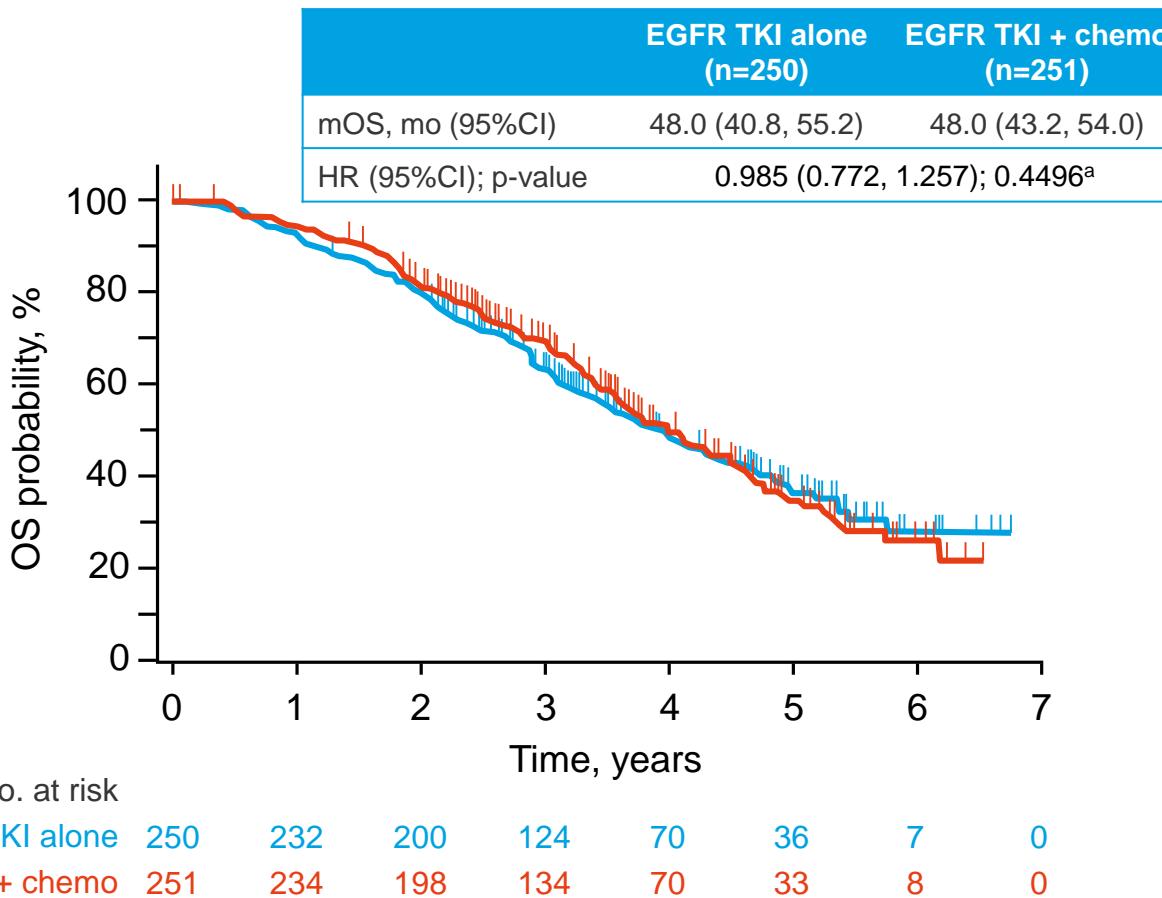

Secondary endpoints

- PFS, ORR, safety

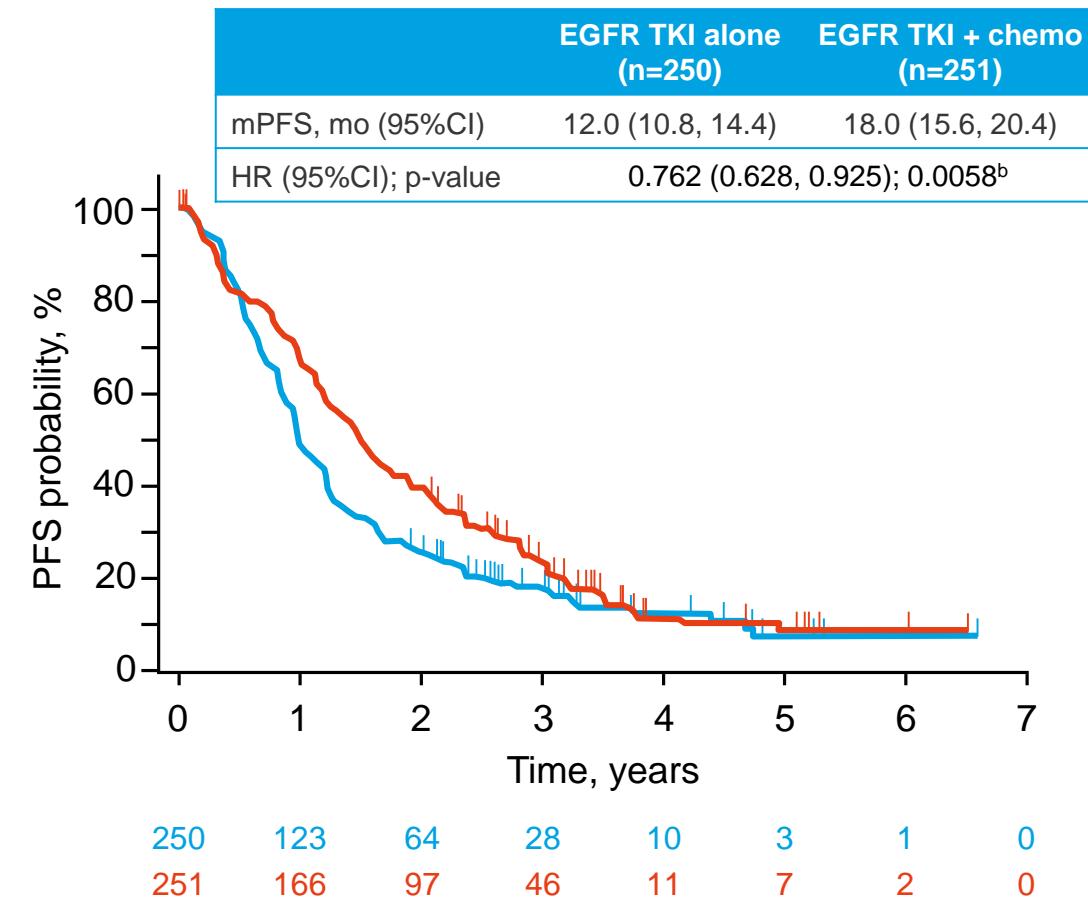

LBA9009: A phase III study comparing EGFR tyrosine kinase inhibitor (EGFR-TKI) monotherapy and EGFR-TKI with inserted cisplatin (CDDP) plus pemetrexed (PEM) as a first-line treatment in patients (pts) with advanced non-squamous non–small-cell lung cancer (NSqNSCLC) harboring EGFR activating mutation (EGFR-NSqNSCLC): JCOG1404/WJOG8214L, AGAIN study – Kanda S, et al

- Key results

Overall survival (ITT)

Progression-free survival (ITT)

^aOne-sided p-value calculated from log-rank test stratified by drug and sex and EGFR mutation subtype;

^btwo-sided p-value calculated from log-rank test.

LBA9009: A phase III study comparing EGFR tyrosine kinase inhibitor (EGFR-TKI) monotherapy and EGFR-TKI with inserted cisplatin (CDDP) plus pemetrexed (PEM) as a first-line treatment in patients (pts) with advanced non-squamous non–small-cell lung cancer (NSqNSCLC) harboring EGFR activating mutation (EGFR-NSqNSCLC): JCOG1404/WJOG8214L, AGAIN study – Kanda S, et al

Led to death	0		1.0		0		0	

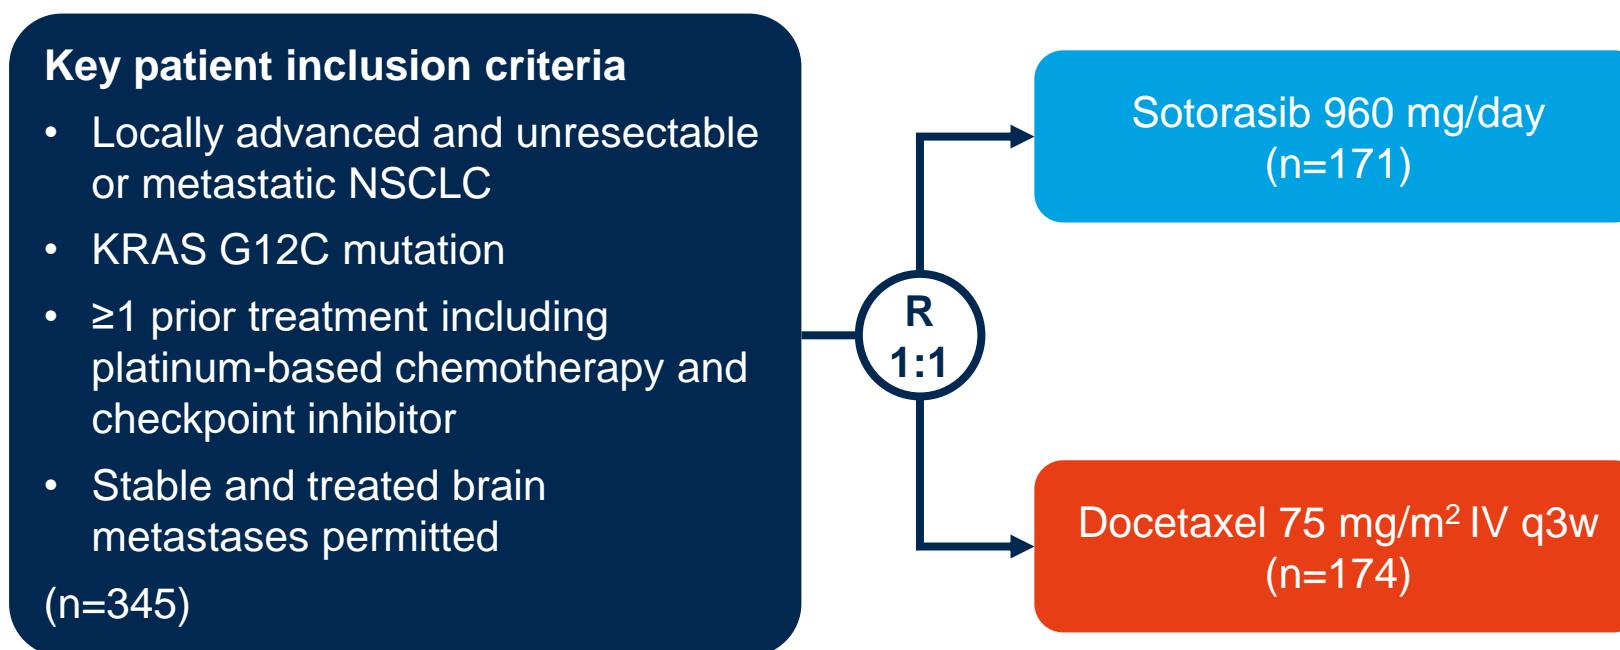

- Conclusions

- In patients with EGFR-mutant advanced nonsquamous NSCLC, using cisplatin + pemetrexed after initial response to EGFR TKI improved PFS, but not OS, compared with EGFR TKI alone and was associated with higher rates of TRAEs

LBA9016: Intracranial efficacy of sotorasib versus docetaxel in pretreated KRAS G12C-mutated advanced non-small cell lung cancer (NSCLC): Practice-informing data from a global, phase 3, randomized, controlled trial (RCT) – Dingemans AC, et al

- Study objective

- To evaluate the intracranial efficacy of sotorasib in previously treated patients with KRAS G12C-mutant advanced NSCLC a post-hoc analysis of the CodeBreak 200 study

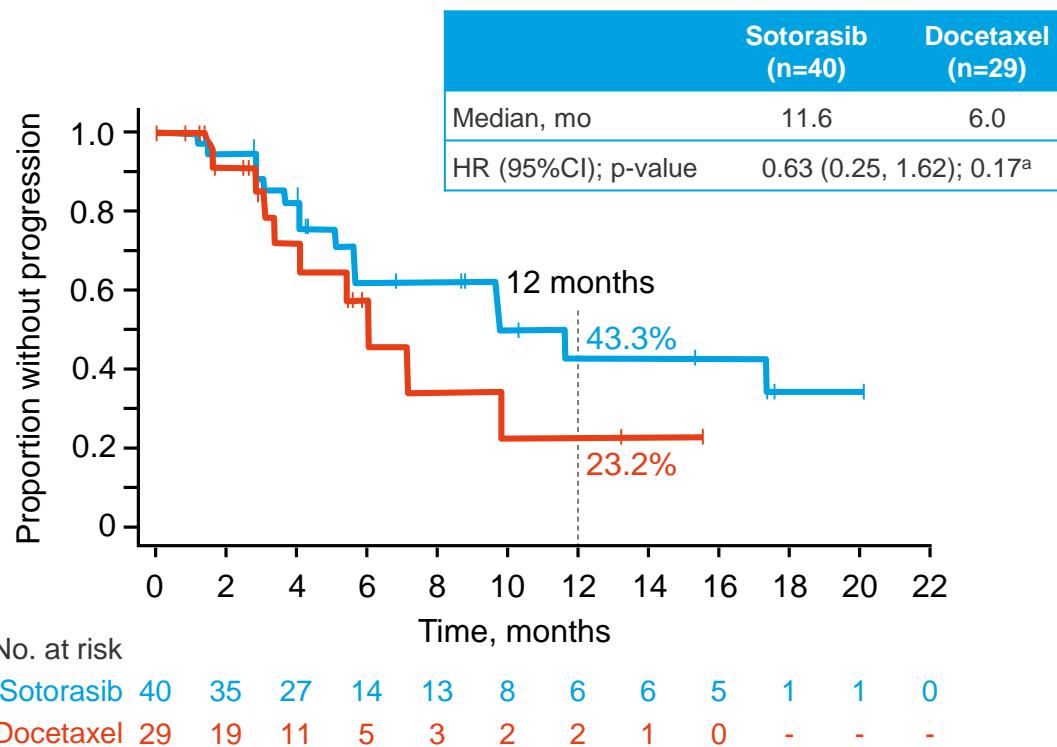

Endpoints

- CNS PFS/progression, intracranial ORR/DCR, safety

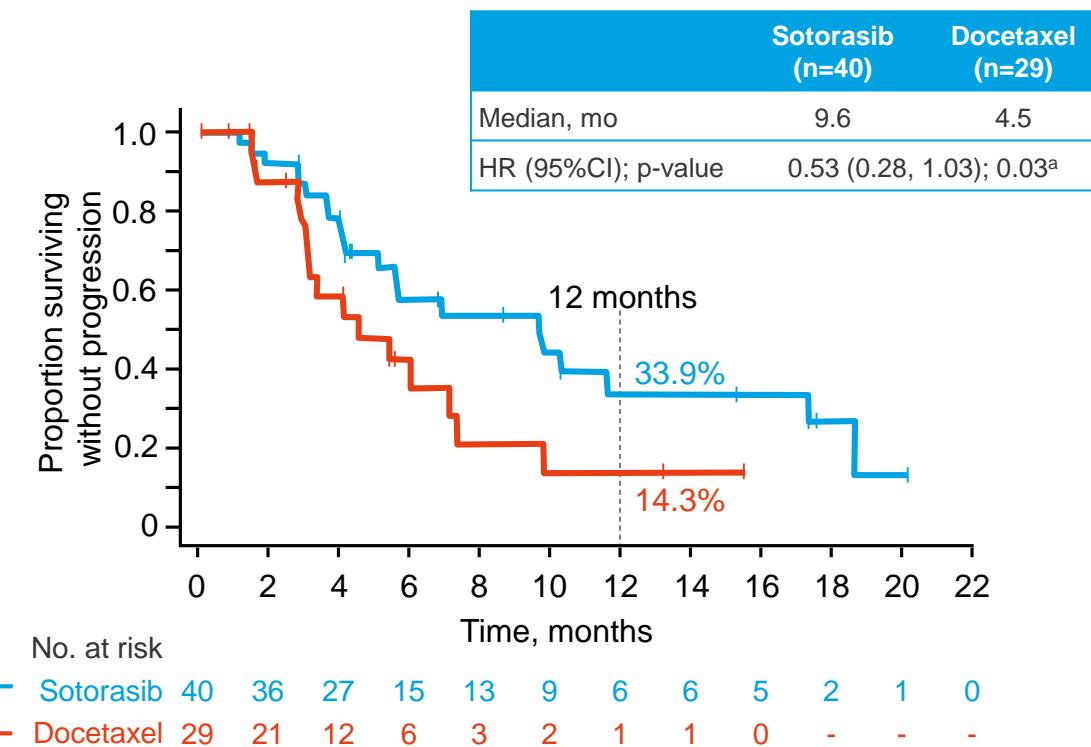

LBA9016: Intracranial efficacy of sotorasib versus docetaxel in pretreated KRAS G12C-mutated advanced non-small cell lung cancer (NSCLC): Practice-informing data from a global, phase 3, randomized, controlled trial (RCT) – Dingemans AC, et al

- Key results

Time to CNS progression in patients with CNS lesions at baseline

CNS progression-free survival in patients with CNS lesions at baseline

^aOne-sided.

LBA9016: Intracranial efficacy of sotorasib versus docetaxel in pretreated KRAS G12C-mutated advanced non-small cell lung cancer (NSCLC): Practice-informing data from a global, phase 3, randomized, controlled trial (RCT) – Dingemans AC, et al

- Key results (cont.)

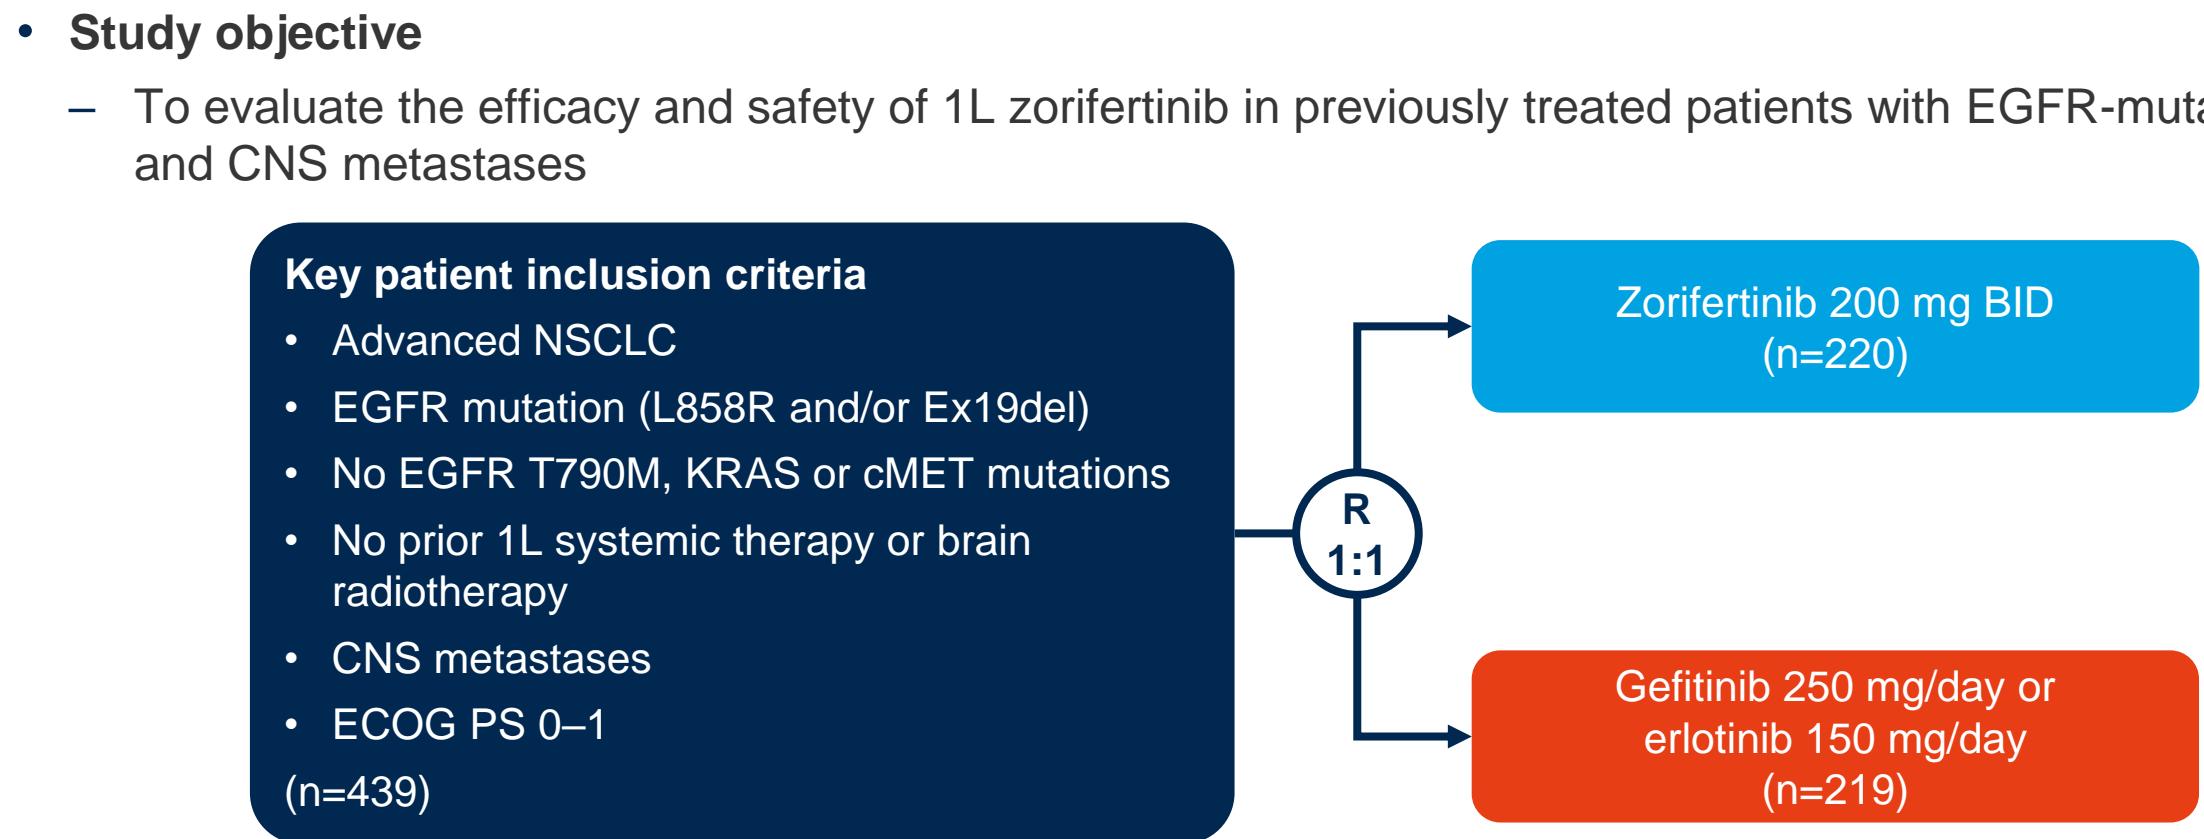

Intracranial response (RANO-BM criteria), n (%)	Patients with stable/pretreated CNS lesions at baseline ^a	
	Sotorasib (n=18)	Docetaxel (n=13)
Confirmed ORR	6 (33.3)	2 (15.4)
CR	1 (5.6)	1 (7.7)
PR	5 (27.8)	1 (7.7)
SD	9 (50.0)	9 (69.2)
PD	1 (5.6)	2 (15.4)
NE/not done	2 (11.2)	0
DCR	15 (83.3)	11 (84.6)
Unconfirmed/confirmed ORR	9 (50.0)	2 (15.4)

- Conclusions

- In previously treated patients with KRAS G12C-mutant advanced NSCLC, sotorasib demonstrated encouraging CNS specific activity compared with docetaxel

^aAll lesions pretreated and stable. Analysis was consequently performed by BICR per a modified exploratory assessment similar to RANO-BM specifically adapted to CodeBreak 200.

9001: Randomized phase 3 study of first-line AZD3759 (zorifertinib) versus gefitinib or erlotinib in EGFR-mutant (EGFRm+) non–small-cell lung cancer (NSCLC) with central nervous system (CNS) metastasis – Wu Y, et al

Primary endpoint

- PFS (BICR, RECIST v1.1)

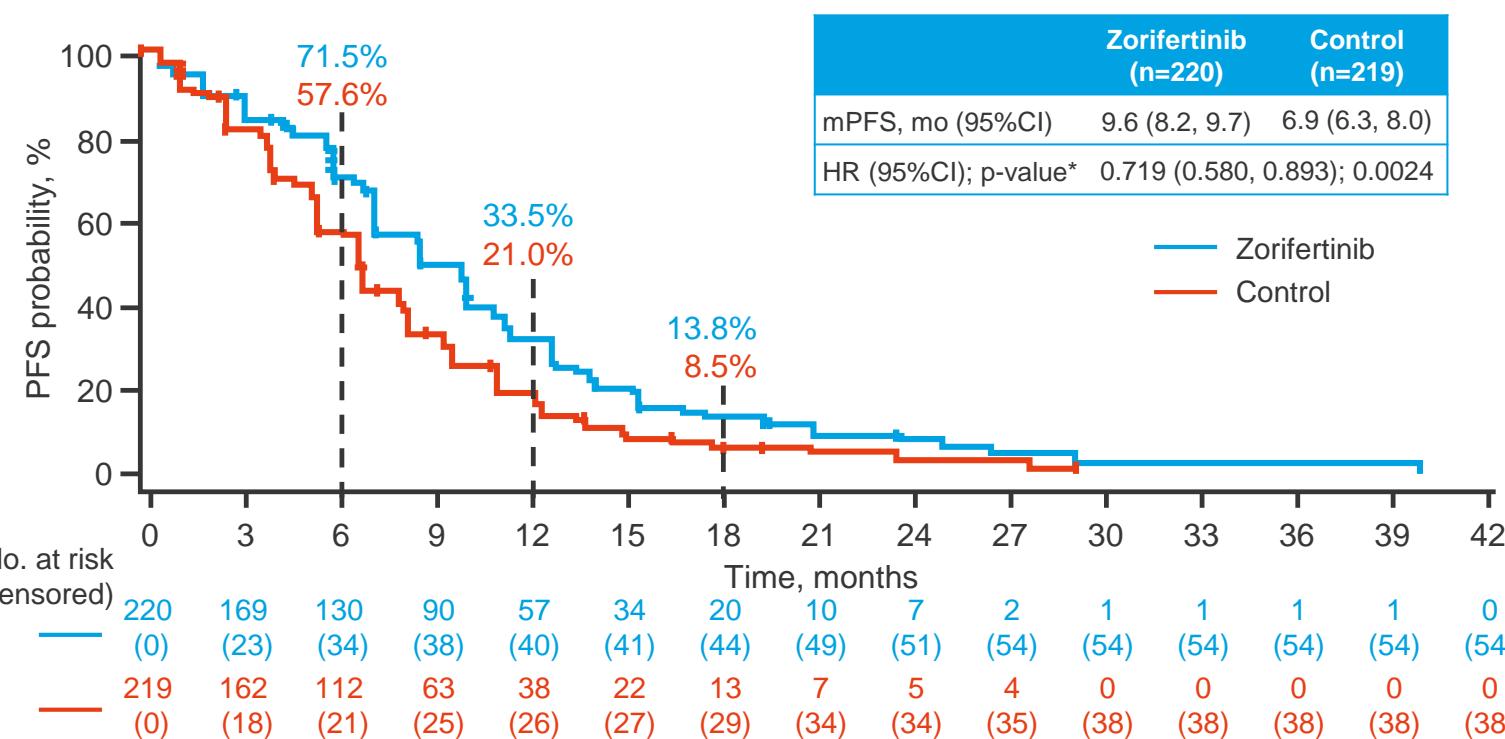

Secondary endpoints

- Cranial PFS, ORR, DoR, OS, safety

9001: Randomized phase 3 study of first-line AZD3759 (zorifertinib) versus gefitinib or erlotinib in EGFR-mutant (EGFRm+) non–small-cell lung cancer (NSCLC) with central nervous system (CNS) metastasis – Wu Y, et al

- Key results

PFS assessed by BICR per RECIST 1.1 (ITT)

Response	BICR per RECIST v1.1	
	Zorifertinib (n=220)	Control (n=219)
ORR, n (%)	151 (68.6)	128 (58.4)
OR (95%CI)	1.533 (1.051, 2.293)	
mDoR, mo (95%CI)	8.2 (6.9, 8.3)	6.8 (5.6, 7.0)
HR (95%CI); p-value*	0.801 (0.613, 1.047); 0.0997	
Intracranial ORR, n (%)	96 (75.6)	76 (62.3)
OR (95%CI)	1.904 (1.098, 3.302)	
mDoR, mo (95%CI)	13.8 (8.5, 22.1)	11.1 (8.3, 14.0)
HR (95%CI); p-value*	0.789 (0.501, 1.244); 0.3037	
Intracranial PFS, mo (95%CI)	15.2 (12.5, 19.4)	8.3 (8.0, 9.6)
HR (95%CI); p-value*	0.467 (0.352, 0.619); <0.0001	

- An exploratory analysis showed that EGFR T790M mutation was associated with resistance in 33.3% and 12.0% of patients in the zorifertinib and control arms, respectively

*Two-sided.

9001: Randomized phase 3 study of first-line AZD3759 (zorifertinib) versus gefitinib or erlotinib in EGFR-mutant (EGFRm+) non–small-cell lung cancer (NSCLC) with central nervous system (CNS) metastasis – Wu Y, et al

- Key results (cont.)

Grade 3–4* TRAEs in ≥5% of patients, n (%)	Zorifertinib (n=220)		Control (n=218)	
	Grade 3	Grade 4	Grade 3	Grade 4
Any	139 (63.2)	5 (2.3)	38 (17.4)	2 (0.9)
AST increased	14 (6.4)	1 (0.5)	16 (7.3)	0
ALT increased	23 (10.5)	1 (0.5)	22 (10.1)	1 (0.5)
Diarrhea	29 (13.2)	0	1 (0.5)	0
Rash	30 (13.6)	0	1 (0.5)	0
Dermatitis acneiform	30 (13.6)	0	1 (0.5)	0
γ-GT increased	12 (5.5)	2 (0.9)	5 (2.3)	0
Hypokalemia	13 (5.9)	1 (0.5)	0	0
Any TRAE led to discontinuation	13 (5.9)		5 (2.3)	

TRAEs leading to dose modification in ≥5% of patients, n (%)	Zorifertinib (n=220)	Control (n=218)
Any	155 (70.5)	38 (17.4)
Rash	39 (17.7)	1 (0.5)
Diarrhea	38 (17.3)	1 (0.5)
Dermatitis acneiform	33 (15.0)	3 (1.4)
ALT increased	31 (14.1)	26 (11.9)
AST increased	30 (13.6)	23 (10.6)
Decreased appetite	18 (8.2)	0
Blood bilirubin increased	14 (6.4)	1 (0.5)

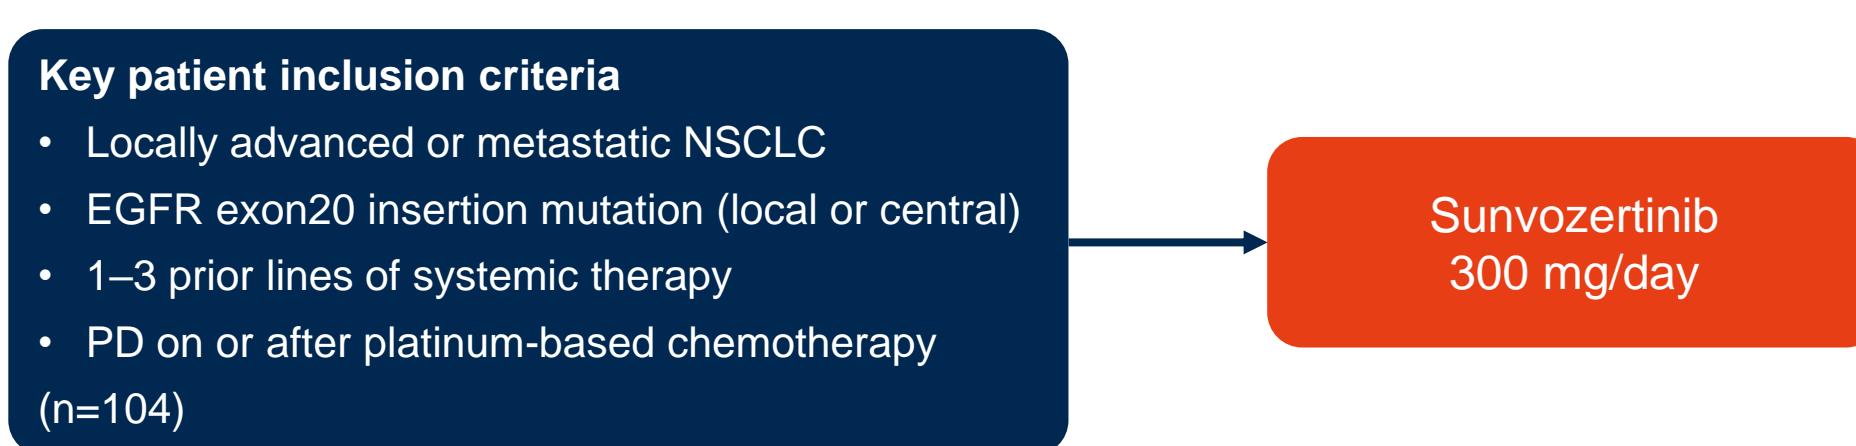

- Conclusions

- In patients with EGFR-mutant NSCLC and CNS metastases, 1L zorifertinib demonstrated encouraging CNS antitumor efficacy compared with gefitinib or erlotinib, however, this is not compared with the current standard osimertinib and had a manageable safety profile

*There was 1 (0.5%) Grade 5 AE in the zorifertinib arm.

9002: Sunvozertinib for the treatment of NSCLC with EGFR Exon20 insertion mutations: The first pivotal study results – Wang M, et al

- Study objective
 - To evaluate the efficacy and safety of sunvozertinib in patients with NSCLC and EGFR exon20 insertion mutations

Primary endpoint

- ORR (IRC)

Secondary endpoints

- DoR, PFS, DCR, OS, safety

9002: Sunvozertinib for the treatment of NSCLC with EGFR Exon20 insertion mutations: The first pivotal study results – Wang M, et al

- Key results

- Conclusions

- In patients with metastatic NSCLC who had progressed on platinum therapy, TTFields + SoC showed a significant improvement in OS, which was driven by ICI-naïve patients who received ICI in 2L, compared with SoC alone and was generally well-tolerated

Other malignancies

SCLC, mesothelioma and thymic epithelial tumors

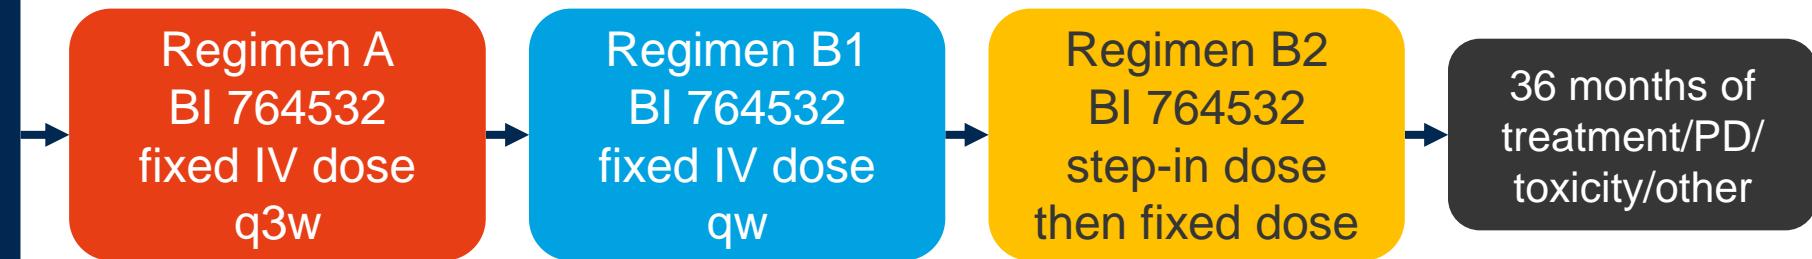

8502: First-in-human dose-escalation trial of the delta-like ligand 3 (DLL3)/CD3 bispecific T-cell engager BI 764532 in patients (pts) with DLL3-positive (DLL3+) small-cell lung cancer (SCLC) and neuroendocrine carcinoma (NEC) – Wermke M, et al

- Study objective
 - To evaluate the safety and antitumor activity of BI 764532, a DLL3/CD3 bispecific T-cell engager, in patients with SCLC and neuroendocrine carcinoma

Key patient inclusion criteria

- Advanced SCLC or neuroendocrine carcinoma^a
- DLL3+ (central)^b
- Patients progressed or were ineligible for available standard treatments (≥ 1 line of platinum-based chemotherapy)
- ECOG PS 0–1

(n=107)

Primary endpoint

- MTD, DLTs

Secondary endpoints

- ORR, PK

^aIncluding extrapulmonary neuroendocrine carcinoma and large cell neuroendocrine carcinoma;

^barchived tissue or in-study biopsy using Ventana DLL3 (SP347) assay.

8502: First-in-human dose-escalation trial of the delta-like ligand 3 (DLL3)/CD3 bispecific T-cell engager BI 764532 in patients (pts) with DLL3-positive (DLL3+) small-cell lung cancer (SCLC) and neuroendocrine carcinoma (NEC) – Wermke M, et al

- Key results

8502: First-in-human dose-escalation trial of the delta-like ligand 3 (DLL3)/CD3 bispecific T-cell engager BI 764532 in patients (pts) with DLL3-positive (DLL3+) small-cell lung cancer (SCLC) and neuroendocrine carcinoma (NEC) – Wermke M, et al

- Key results (cont.)

TRAEs occurring in ≥10% of patients, n (%)	All grade	Grade 1–2	Grade 3–5
Any	92 (86)	63 (59)	29 (27)
Cytokine release syndrome	63 (59)	61 (57)	2 (2)
Lymphocyte count decreased	21 (20)	4 (3)	17 (16)
Dysgeusia	21 (20)	21 (20)	0
Asthenia	20 (19)	19 (18)	1 (<1)
Pyrexia	19 (18)	19 (18)	0
AST increased	15 (14)	13 (12)	2 (2)
Fatigue	15 (14)	14 (13)	1 (<1)
Nausea	13 (12)	13 (12)	0

DLTs, n	n=107
Any	5
Cytokine release syndrome, grade 3–4	2
Confusional state, grade 3	1
Infusion-related reaction, grade 2	1
Nervous system disorder, grade 3	1

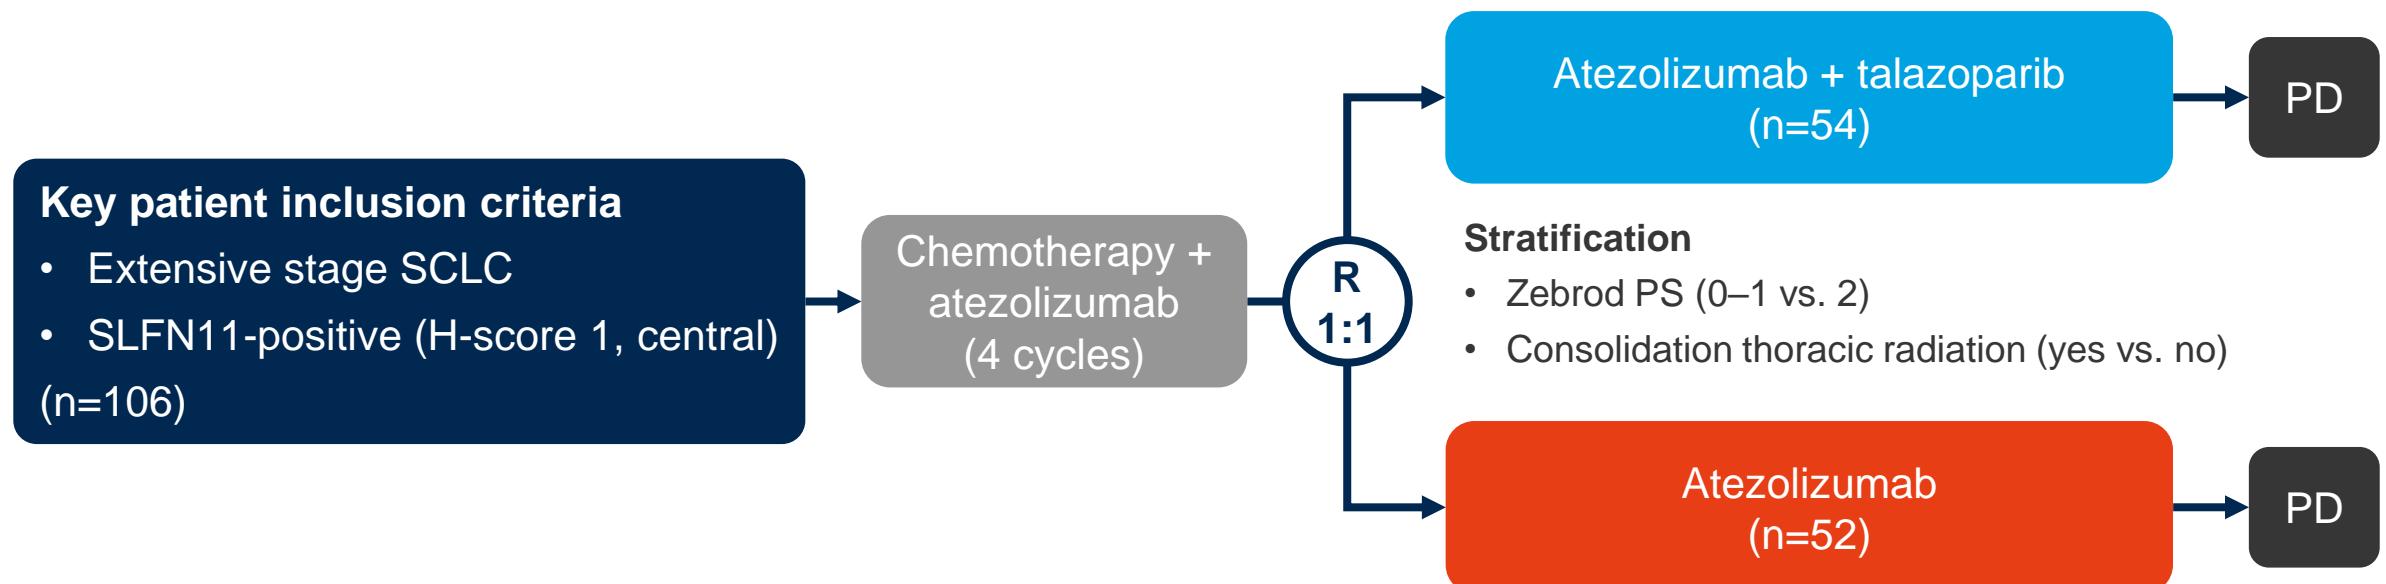

- Conclusions

- In patients with SCLC and neuroendocrine carcinoma, BI 764532 demonstrated encouraging antitumor activity at doses of ≥90 µg/kg with a manageable safety profile

8504: SWOG S1929: Phase II randomized study of maintenance atezolizumab (A) versus atezolizumab + talazoparib (AT) in patients with SLFN11 positive extensive stage small cell lung cancer (ES-SCLC) – Karim NA, et al

- Study objective

- To evaluate the efficacy and safety of maintenance atezolizumab ± talazoparib in patients with SLFN11-positive extensive stage SCLC in the SWOG S1929 study

Primary endpoint

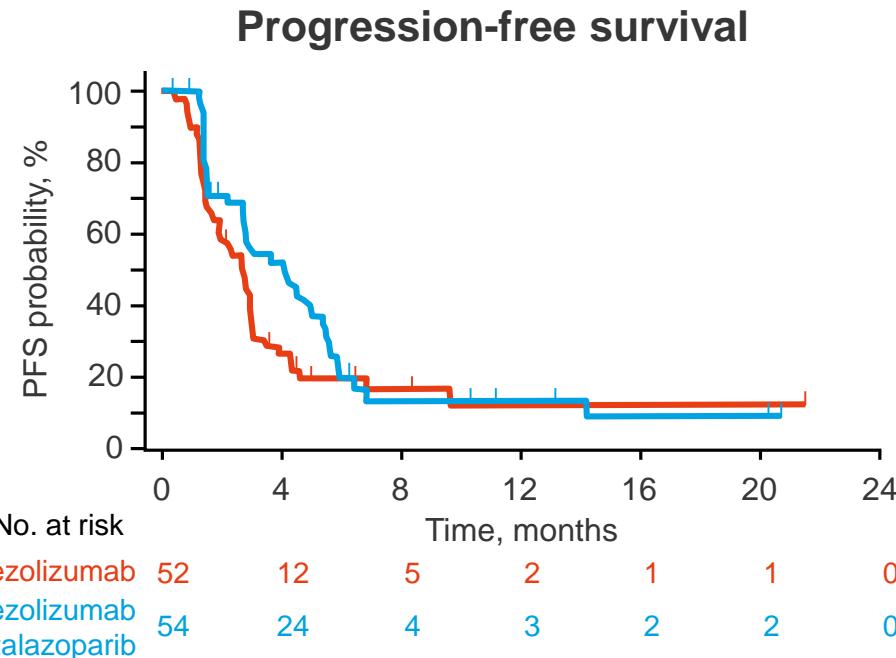

- PFS

Secondary endpoints

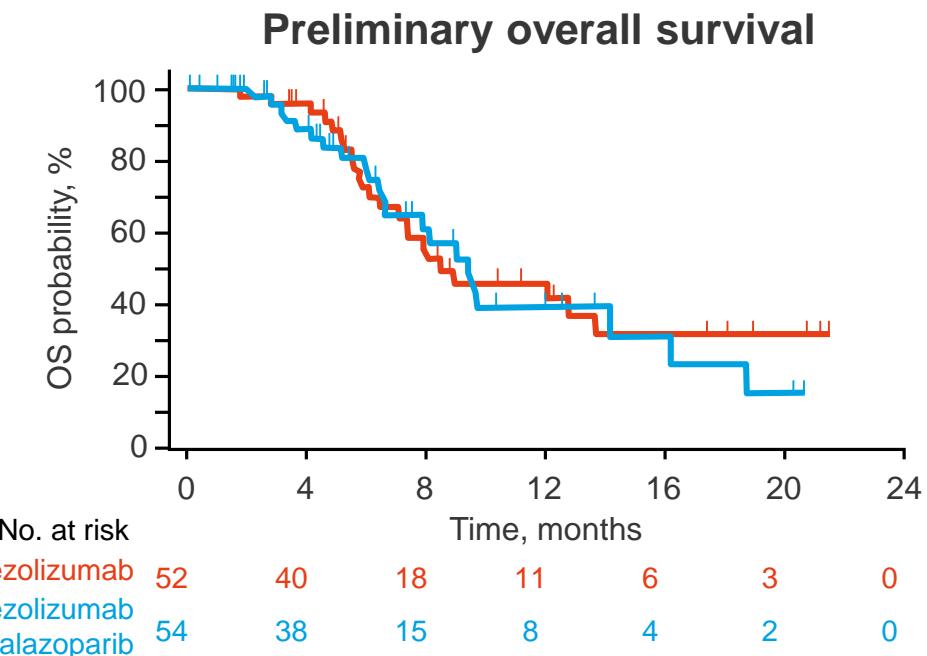

- ORR, OS, safety

8504: SWOG S1929: Phase II randomized study of maintenance atezolizumab (A) versus atezolizumab + talazoparib (AT) in patients with SLFN11 positive extensive stage small cell lung cancer (ES-SCLC) – Karim NA, et al

- Key results

	Atezolizumab (n=52)	Atezolizumab + talazoparib (n=54)
Events, n	41	39
mPFS, mo (80%CI)	2.8 (2.0, 2.9)	4.2 (2.8, 4.7)
HR (80%CI); p-value ^a	0.70 (0.52, 0.94); 0.056	

	Atezolizumab (n=52)	Atezolizumab + talazoparib (n=54)
Events, n	23	22
mOS, mo (80%CI)	8.5 (7.4, 12.7)	9.4 (8.1, 14.2)
HR (80%CI); p-value ^a	0.30 (0.80, 1.71); 0.30	

^aOne-sided Log-rank stratified.

8504: SWOG S1929: Phase II randomized study of maintenance atezolizumab (A) versus atezolizumab + talazoparib (AT) in patients with SLFN11 positive extensive stage small cell lung cancer (ES-SCLC) – Karim NA, et al

- Key results (cont.)

Response in evaluable patients	Atezolizumab (n=32)	Atezolizumab + talazoparib (n=34)

PR	5 (16)	4 (12)
SD	17 (53)	16 (47)
PD	10 (31)	12 (35)
NE	0	2 (6)
DCR, % (80%CI); p-value	69 (55, 80)	59 (46, 70); 0.27

Grade 3–4 TRAEs occurring in ≥3% of patients or grade 4 in any patient, n (%)	Atezolizumab (n=47)		Atezolizumab + talazoparib (n=52)	
	G3	G4	G3	G4
Hematologic				
Anemia	1 (2)	0	19 (37)	0
Lymphocyte count decreased	1 (2)	0	3 (6)	0
Neutrophil count decreased	0	0	0	1 (2)
Platelet count decreased	0	0	9 (17)	4 (8)
WBC count decreased	0	0	2 (4)	1 (2)
Non-hematologic				
AST increased	2 (4)	0	2 (4)	1 (2)
ALT increased	1 (2)	1 (2)	2 (4)	1 (2)
Hyperglycemia	0	0	0	1 (2)
Cardiac arrest	0	0	0	1 (2)
Lung infection	2 (4)	0	0	1 (2)

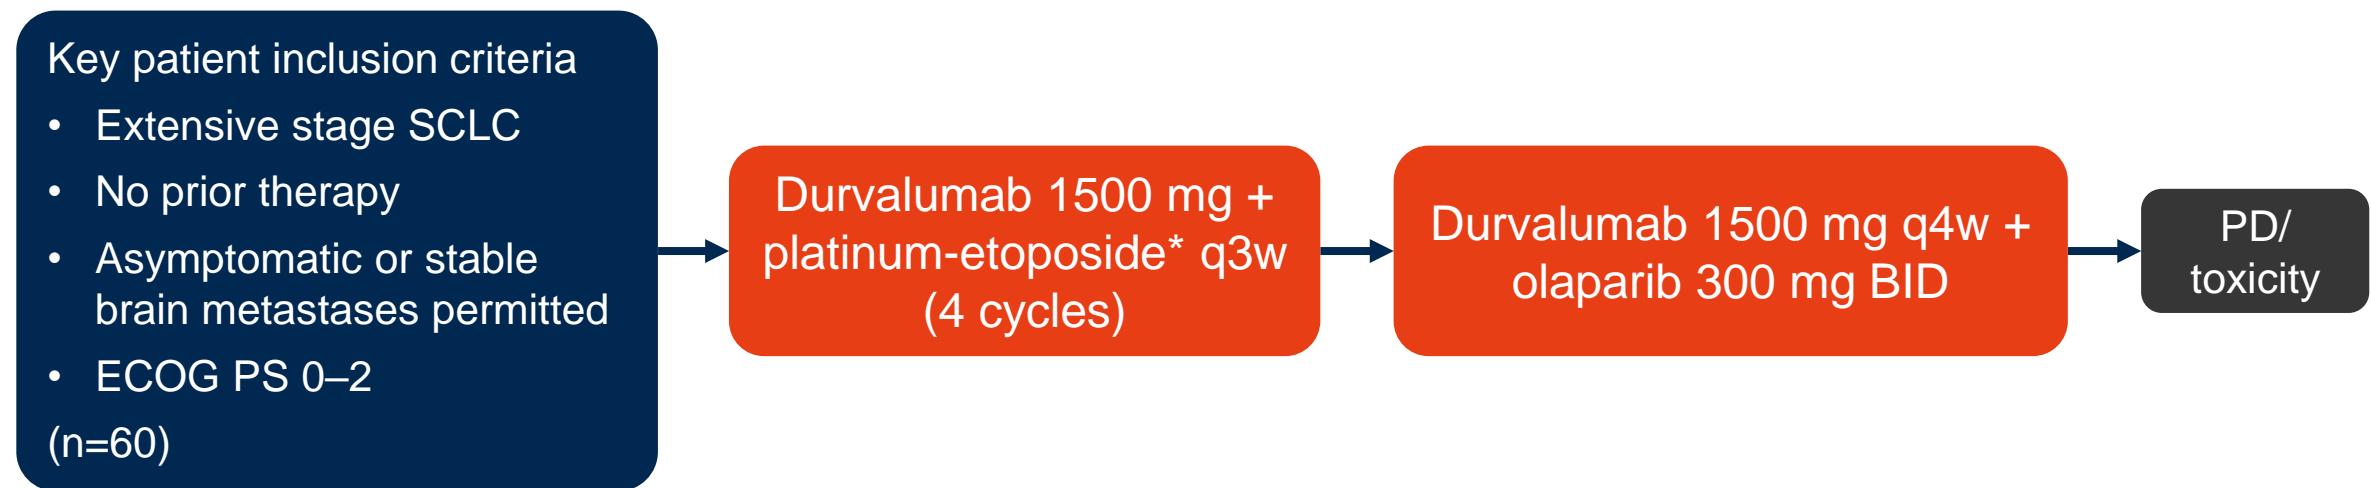

- Conclusions

- In patients with SLFN11-positive SCLC, maintenance atezolizumab + talazoparib prolonged PFS compared with atezolizumab alone and was associated with a higher incidence of hematologic AEs

*One grade 5 TRAE of sepsis in the atezolizumab + talazoparib arm.

8518: Phase II study of durvalumab plus olaparib as maintenance therapy in extensive-stage small-cell lung cancer (TRIDENT): Preliminary efficacy and safety results – Huang Y, et al

- Study objective
 - To evaluate the efficacy and safety of maintenance durvalumab + olaparib in patients with extensive stage SCLC in the TRIDENT study

Primary endpoint

- 12-month PFS rate (RECIST v1.1)

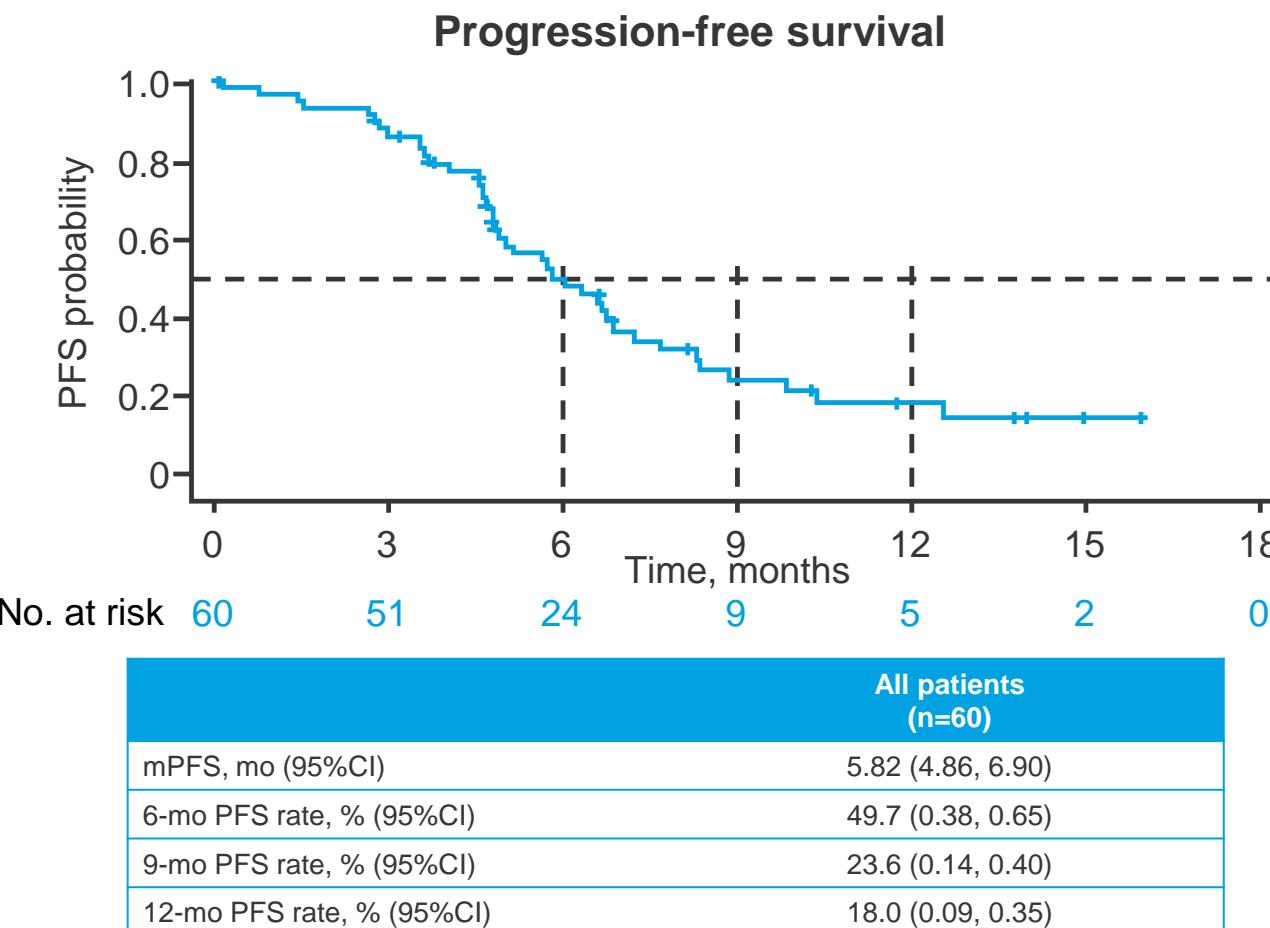

Secondary endpoints

- PFS, ORR, DoR, OS, safety

*Etoposide 80–100 mg/m² D1–3 + carboplatin AUC5–6 or cisplatin 75–80 mg/m².

8518: Phase II study of durvalumab plus olaparib as maintenance therapy in extensive-stage small-cell lung cancer (TRIDENT): Preliminary efficacy and safety results – Huang Y, et al

- Key results

	All patients (n=60)
Response	
ORR, % (95%CI)	73.4 (62, 85)
BOR, n (%)	
CR	1 (1.7)
PR	43 (71.7)
SD	6 (10)
PD	9 (15)
NE	1 (1.7)
DCR, % (95%CI)	81 (70, 90)
DoR, mo (95%CI)	5.36 (4.37, 7.56)
mOS, mo (95%CI)	NR (10.15, NR)

8518: Phase II study of durvalumab plus olaparib as maintenance therapy in extensive-stage small-cell lung cancer (TRIDENT): Preliminary efficacy and safety results – Huang Y, et al

- Key results (cont.)

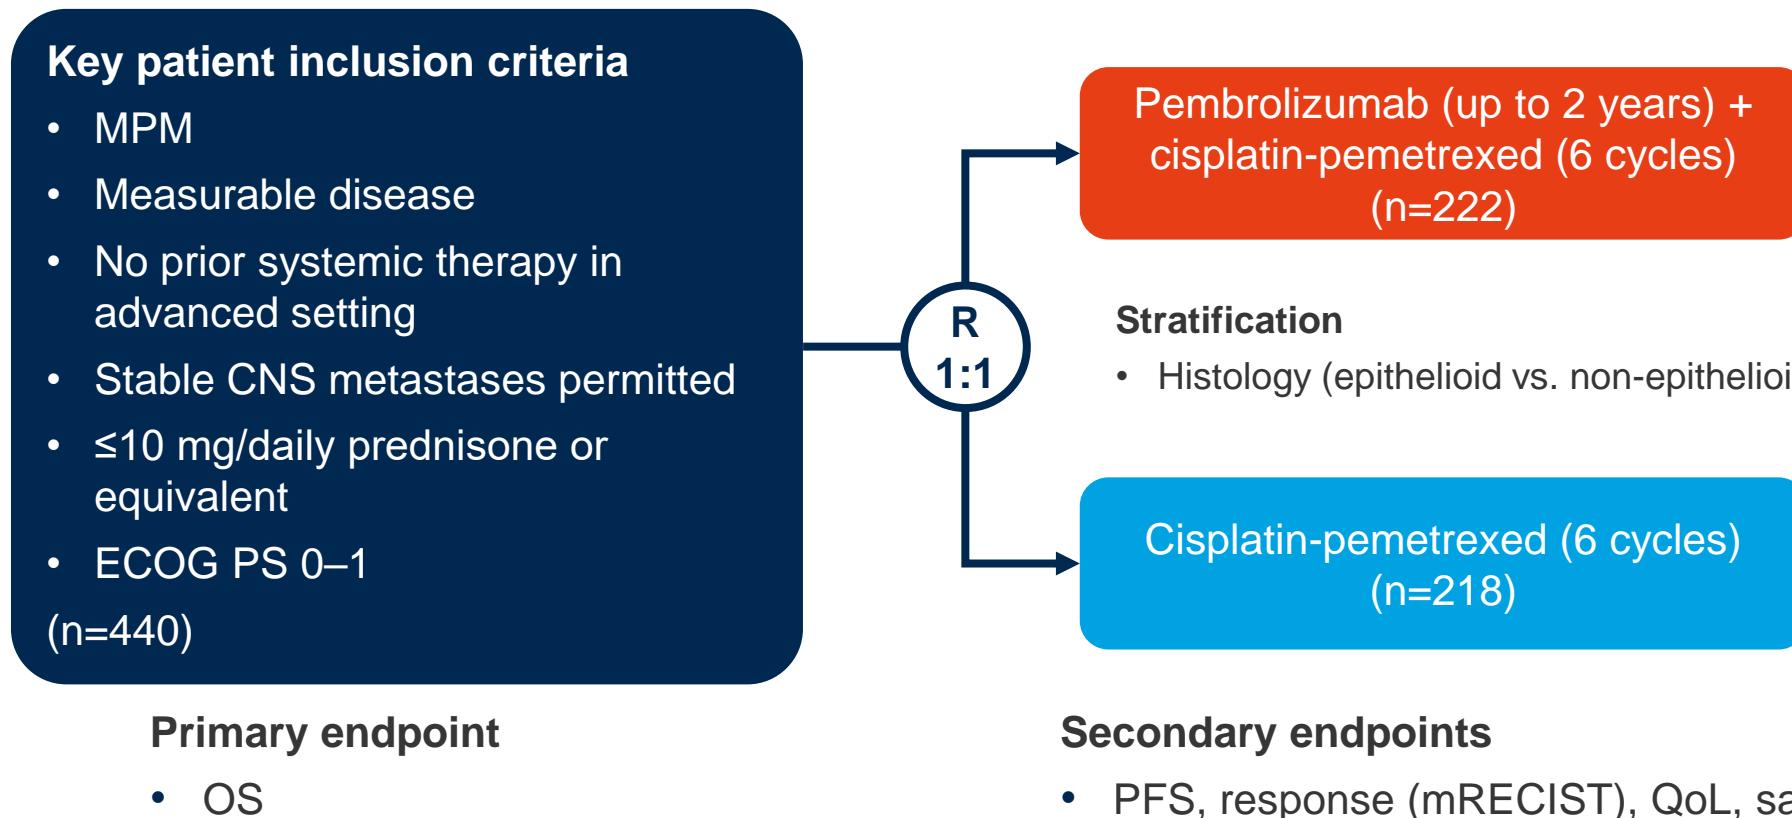

AEs, n (%)	Total (n=60)
Any	56 (93.3)
Grade ≥3	22 (36.7)
Serious	13 (21.7)
Treatment-related	11 (18.3)
Led to discontinuation	5 (8.3)
Led to death	1 (1.7)

- Conclusions

- In patients with extensive stage SCLC, 2L durvalumab + olaparib demonstrated some signal of activity and was generally well-tolerated

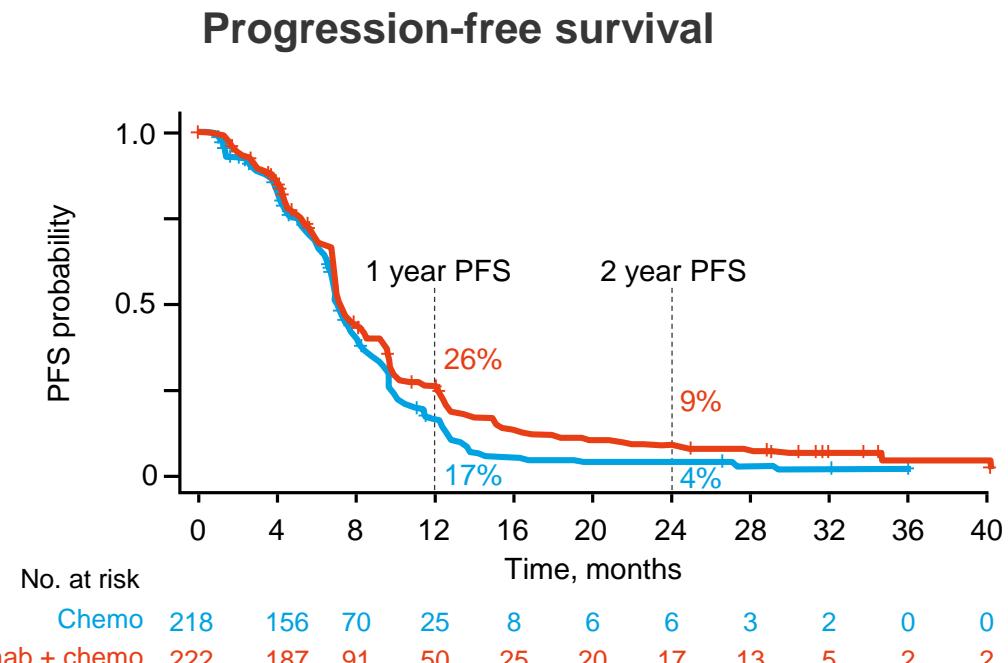

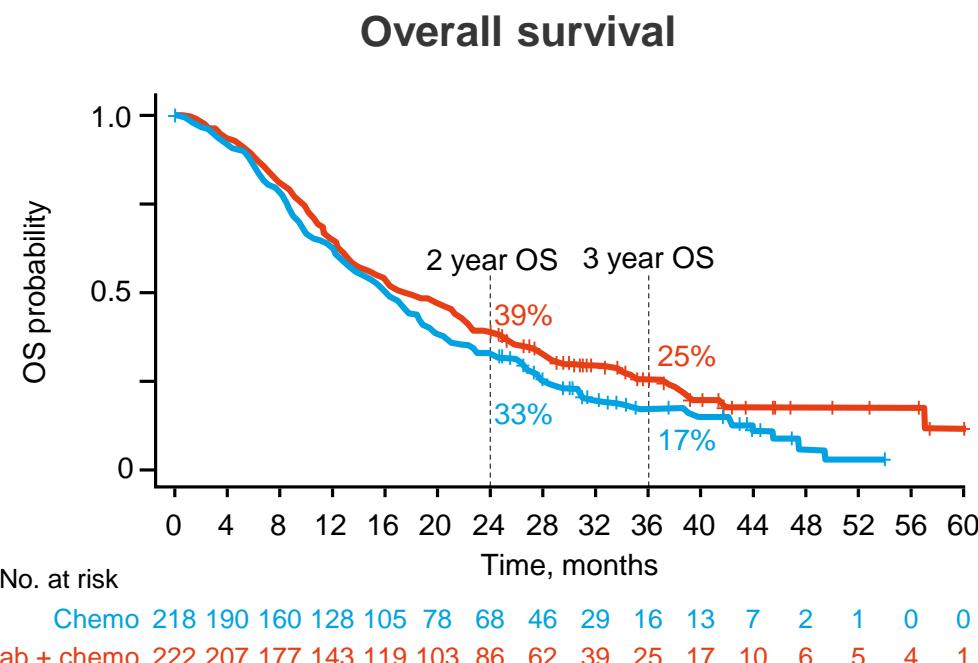

LBA8505: IND227 phase III (P3) study of cisplatin/pemetrexed (CP) with or without pembrolizumab (Pembro) in patients (pts) with malignant pleural mesothelioma (PM): A CCTG, NCIN, and IFCT trial – Chu QS, et al

- Study objective
 - To evaluate the efficacy and safety of pembrolizumab + cisplatin-pemetrexed in patients with MPM

LBA8505: IND227 phase III (P3) study of cisplatin/pemetrexed (CP) with or without pembrolizumab (Pembro) in patients (pts) with malignant pleural mesothelioma (PM): A CCTG, NCIN, and IFCT trial – Chu QS, et al
